# **MotionCam-3D Color** **(Blue)**

Precise 3D Data in Motion for Time-Critical  
Automation & Dynamic Object Handling

# Precise 3D Data in Motion

**MotionCam-3D Color (Blue)** is the only 3D sensor that delivers submillimeter accuracy at up to 20 fps—even on moving objects. Its patented parallel structured light technology enables real-time, high-resolution scanning without halting production lines.

## Dynamic Object Handling & Time-Critical Automation

Up to **5x faster** data acquisition \*

Cycle time decreased by up to **2 seconds** thanks to 3D data acquisition in motion

## Ideal for continuous 3D scanning of moving objects & high-throughput applications

- Bin Picking
- Depalletization
- Conveyor Picking
- Inspection in Motion
- Automated Digital Twinning

The throughput of applications increased up to **2,5 times**

RGB mapping on depth data enables **AI data** processing

The Only 3D Camera that captures 3D data in motion up to **90 mph** (144 km/h)

\* Compared to traditional Sequential Structured Light 3D Scanner

# Meet the Next Gen with a 50% Leap in 3D Performance

## Work Faster

Your applications will work faster — cut exposure time in half while maintaining the same high-quality results.

## 50% Performance Boost

Crystal-clear 3D data even at the edge of the scanning range — with 50% more performance, speed, and precision at long distances.

## Light Resistance

Stay productive in any lighting — capture accurate 3D data even in direct sunlight, so your applications can run uninterrupted.

## Pick More

97% of logistics objects are now pickable, thanks to 25% better reconstruction of even transparent and most challenging materials.

## Richer Colors

Best-in-class RGB 3D data powers high-accuracy inspection, and digital twinning, ready for seamless AI integration.

## Zero Maintenance Downtime

Your applications run without interruptions. Autonomous maintenance of your device with a single click, no manual setup or special marker patterns needed.

# 97% of Logistics & Automotive Objects Are Now Pickable

Thanks to a 25% improvement in transparent scanning and challenging materials, 97% of logistics & automotive objects are now pickable, including dark, shiny & metallic objects.

Eliminate pre-sorting and expand automation to items previously considered unscannable. High-fidelity point cloud ensures even the most complex shapes are grip-ready.

3D scan with color texture of unstructured medical items in transparent packaging

3D scan with color texture showing 4 six-packs of plastic bottles in transparent foil

3D scan with color texture of mixed bin filled with transparent and glossy items

Point cloud colored with depth map showing transparent and glossy items

3D scan of unstructured mixed bin filled with reflective metallic parts

Point cloud colored with depth map showing unstructured mixed bin filled with reflective metallic parts

# Accelerate Your Throughput — Cut Cycle Times by 50%

Unlock faster, sharper, and longer-range scanning. Enhanced projection unit delivers 50% boost in performance—speed, range, and accuracy, with improved signal-to-noise ratio.

- **Scan faster** – Cut even demanding scans durations by 50% with reduced exposure time.
- **Scan further** – Stronger projection and lower noise allow accurate long-distance scanning, ideal for pallet and large-part inspection at 4m / 13 feet.

3D scan with color texture of car door,  
from 3,5 m / 11,5 ft

3D scan with normals of car door,  
from 3,5 m / 11,5 ft

3D pointcloud with color texture showing  
a stack of black tires scanned from 4 m / 13,1 ft distance

3D scan with normals showing a stack of black  
tires scanned from 4 m / 13,1 ft distance

Point cloud colored with depth map showing cargo  
truck trailer scan, 17m / 55.7ft scanning distance  
(Tilted view - Scan taken from rear cargo door)

3D scan with normals showing cargo truck trailer  
scan, 17m / 55.7ft scanning distance  
(Tilted view - Scan taken from rear cargo door)

# From Daylight to Over 1200°C/2200°F Metal Surfaces

Get clean, detailed scans where traditional systems fail.

- **Stay accurate in any lighting** – Next-gen Ambient Light Resistance delivers reliable 3D data, even in direct sunlight or strong lighting.
- **Localization and quality control of extreme surfaces** – Precisely scan even hot metal objects, over 1200°C / 2200°F.

3D scan with color texture of boxes at high noon - 66ms capture time in dynamic mode

3D scan with normals of boxes at high noon - 66ms capture time in dynamic mode

3D scan with color texture of industrial furnace with hot metal at 1200°C / 2200°F

3D scan with normals showing hot metal object at 1200°C / 2200°F

Single perspective 3D scan

MultiView: Multi perspective 3D scan

# Zero Maintenance Downtime

Forget everything you knew about device maintenance. Say goodbye to tedious manual on-site procedures and the complexities of scanning special marker patterns.

Our groundbreaking Autonomous Maintenance, seamlessly integrated within our software suite, allows you to fine-tune intrinsic parameters of your **MotionCam-3D Color (Blue)** effortlessly with a single click feature. Experience device maintenance as never seen before – just click, and it's done.

## Fastest MultiView on the Market

Enhance your time-critical applications through simultaneous blue and red laser scanning with no interference. This advanced setup significantly boosts cycle times and data capture rates.

Whether free-running at full FPS for high-speed tasks like vehicle scanning, wood log measurement, or capturing snapshots with two devices simultaneously, this technology enhances 3D data completeness — leading to more accurate localization and higher success rates in demanding applications like Bin Picking and Digital Twinning.
