THE CUSTOM-MADELINEAR MOTION SYSTEM

Q.

TOROTONITA

Customized linear motion technology. Based on our proven Extrusion and Fastening Technology, we have developed Linear Motion Units that meet the highest customer expectations in terms of versatility, stability and efficiency.

Robotunits offers a Linear Motion System of the highest quality and precision, with a maximum potential for cost and time savings in design and assembly.

00

Fully integrated Linear Motion System

- completely compatible with the entire Modular Automation System
- belt return inside the extrusion
- · leaves 3 sides of the extrusion free for additional attachments
- available in 50 mm series

It runs and runs and runs ...

- single or double idlers can be used, depending on the load
- high strength due to special captive design of idler extrusion
- large rollers
- integrated fastening option for Flexible Energy Chain

Guiderails instead of guide systems

- easily mounted guiderails eliminate the need for a separate guide system
- playfree datum edge positioning
- · hardened, tempered steel guiderail allow heavier loads
- · high wear resistance allows smooth and quiet operation
- quick and easy assembly

Modular design of linear motion units

- · customized linear motion units, from single units to complex 3 axis gantry systems
- single and multiple guiderails available in one system
- X-,Y-,Z-combinations possible

Drive options

- · motor selection tailored to performance requirements
- minimal design time through expansion coupling system
- one size pulley for all chassis sizes

Protection against damage

 integrated overrun protection prevents mechanical damage

Save time, cut cost

- easy selection of components
- easy to order
- minimal design time required
- quick and easy attachment of accessories
- easy installation

LIL5010

Linear Motion Unit 50

Application

For transportation and exact postitioning of parts.

Technical Data

Base extrusion 50x100 (PIL 5010) Standard carriage plate: 200x150 mm Md max.: 60 Nm (max. transmittable drive torque) Carriage stroke per revolution: 200 mm Pitch circle diameter: 63.66 mm Idle torque: 1 Nm Positioning accuracy: ± 0.2 mm (without drive backlash) Weight of carriage: 2.66 kg

Assembly InstructionsEccentric Key LIN 9990 (page 169)See page 195

Dimensions

is needed to adjust the eccentric roller
