Maximize Food and Beverage Production

With cutting-edge industrial scanning and machine vision solutions

Food and beverage production is an increasingly complex task. With growing challenges from quality control, regulatory compliance, and rising consumer demands, manufacturers need new ways to speed up production while also increasing safety. And while automation promises advances in efficiency, pulling together a comprehensive solution is no cake walk either.

With the emergence of fixed industrial scanners (FIS) and machine vision (MV), food and beverage manufacturers have new tools to automate their lines, boost their performance, and enable track-and-trace capabilities at every stage of production.

Whether you are automating inspection, reading barcodes, or anything in between, our FIS & MV solutions instantly transform your data into actionable business information that enables error-free actions.

Fixed Industrial Scanning

Track and trace items traveling on the conveyor or through key portal transition points in manufacturing plants, distribution centers and warehouses.

Machine Vision

Ideal for tracking and tracing and inspecting products on production lines, making them an important technology for quality control. Applications include determining component presence or absence, scanning barcodes and detecting defects.

Zebra Aurora™ Software

Zebra Aurora brings a new level of simplicity to controlling enterprise-wide manufacturing and logistics automation solutions—this one unified platform controls all Zebra Fixed Industrial Scanners and Machine Vision Smart Cameras.

A Smart Approach to Automation

Zebra fixed industrial scanners and machine vision products deliver the power, intelligence and speed you need to improve your food safety procedures, ensure compliance and optimize your food and beverage operation. With solutions that enable track-and-trace capabilities, barcode scanning, quality inspection and more, we can help you improve the safety, traceability and transparency of your operation.

Fixed Industrial Scanners

Whether you're capturing simple package label barcodes or complex printed and direct part marked barcodes of varying sizes and distances, we have a scanner that meets your needs.

FS10
Compact fits-anywhere plug and play scanning for basic offline track-and-trace apps.

FS20
Compact networkable scanning for basic track-and-trace apps or Android.

FS40
Comprehensive features for sophisticated track-and-trace apps.

FS70
Completely customizable to enable the most challenging track-and-trace apps.

Machine Vision Systems

Inspections on your production line are key to product quality. From simple absence/presence checks to complex defect detection, our machine vision systems do it all.

VS20 Smart Sensor
Compact networkable scanning for basic inspection apps

VS40 Smart Camera
Comprehensive features for sophisticated inspection apps

VS70 Smart Camera
Completely customizable to enable the most challenging inspection apps

Software - Zebra Aurora™

With this simple but powerful software interface, it's easy to set up, deploy and run Zebra's Fixed Industrial Scanners and Machine Vision Smart Cameras, eliminating the need for different tools and reducing training and deployment time.
