## 5 Port Solenoid Valve

Connector Type Manifold Metal Seal / Rubber Seal

## Connector Type Manifold

## Series VQC1000/2000

## Power saving <br> Standard: 0.4 w (Reduced by $60 \%$ compared to exising model) High-pressure (1 MPa, Metal seal): 0.95 w

## Accommodates gateway-type serial wiring.

- Gateway unit types include DeviceNet ${ }^{\text {TM }}$, PROFIBUS DP, CC-Link, and EtherNet/IP ${ }^{\text {TM }}$.
- Because just one gateway unit controls up to 4 branch lines, it offers much more freedom in choosing valve mounting locations in comparison with other serial units.
- Manifolds and input blocks can be mounted near the actuator, allowing for use of short air piping or electric wiring.
- The package wiring with connector cable reduces the potential for incorrect wiring and improves wiring efficiency.
- A single cable from the gateway provides both signal and power to each branch, thus eliminating the need for separate power connections for each manifold valve and input block.
- The input block also employs a multi-pin connector so that the number of stations can be changed easily, as with the manifold.

## Applicable to EX600 (Input/Output) serial transmission system (Fieldbus system)

- Available for DeviceNet ${ }^{\text {TM }}$, PROFIBUS DP and CC-Link fieldbus protocols
- Max. 9 units Note) can be connected in any order.

The unit to connect input device such as an auto switch, pressure switch and flow switch, and the unit to connect output device such as a solenoid valve, relay and indicator light can be connected in any order.
Note) Except SI unit

- Analogue Input Unit can be connected with analogue input device. As well as a Digital (switch) Input/Output Unit, a unit applicable to analogue signal is provided, and can be connected with various device for control.
- Self-diagnosis function

It is possible to ascertain the maintenance period and identify the parts that
 require maintenance, by an input (sensor) open circuit detecting function and an input/output signal of ON/OFF counter function. Also, the monitoring of input/output signal and the setting of parameters can be performed with a Handheld Terminal.

## OCompact and high flow

| Series | Manifold pitch (mm) | Flow-rate characteristics Note) |  |  |  |  |  | Applicable cylinder bore size (mm) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Metal seal |  |  | Rubber seal |  |  |  |
|  |  | C [dm³/(s.bar)] | b | Cv | C [dm³/(s.bar)] | b | Cv |  |
| VQC1000 | 10.5 | 0.72 | 0.25 | 0.18 | 1.0 | 0.30 | 0.25 | Up to ø50 |
| VQC2000 | 16 | 2.6 | 0.15 | 0.60 | 3.2 | 0.30 | 0.80 | Up to $\varnothing 80$ |

Note) Flow-rate characteristics: 2-position single, $4 / 2 \rightarrow 5 / 3$ (A/B $\rightarrow$ R1/R2)
© Connector entry direction can be changed with a single push. (FFP kit)
The connector entry direction can be changed from the top to the side by simply pressing the manual release button.
It is not necessary to use the manual release button when switching from the side to the top.

© A wide variety of prepackaged wiring configurations

- Our six standard wiring packages bring a world of ease to wiring and maintenance work, while the protective enclosures of four of them conform to IP67 standards.
- The S kit is compatible with a combined I/O unit. (Not applicable to Gateway unit)

## © Connector type manifold

- The use of multi-pin connectors to replace wiring inside manifold blocks provides flexibility when adding stations or changing manifold configuration.
- All kits use multi-pin connectors, so switching from the F kit (D-sub connector) to the $S$ kit (serial transmission) can be done simply by changing the kit section.
(Refer to the connector wiring diagram.)
Printed circuit board patterns between connectors are shifted at every station. This allows for viable connections to take place without necessarily specifying whether the manifold station is double, single, or mixed wiring.

## Dual 3-port valves, 4 positions <br> VQC1000/2000 (Rubber seal only)

- Two 3-port valves built into one body
- The 3-port valves on the A and B sides can operate independently.
- When used as 3-port valves, only half the number of stations is required.
- Can also be used as a 4-position, 5-port type valve.

Exhaust center: VQC1A01 VQC2A01

## Series

Cylinder Speed Chart
This chart is provided as guidelines only.
For performance under various conditions, use SMC's Model Selection Program before making a judgment.

* It is when the cylinder is extending that is meter-out controlled by speed controller which is directly connected with cylinder, and its needle valve with being fully open.
* The average velocity of the cylinder is what the stroke is divided by the total stroke time.
* Load factor: ((Load mass x 9.8)/Theoretical force) x 100\%

Stations

## 01

The maximum number of stations differs depending on the electrical entry. (Refer to 3 Kit type/Electrical
entry/Cable length.)
Note) In case of compatibility with the $S$ kit/AS-Interface, the maximum number of solenoids is as shown below, so
please be careful of the number of stations.

- 8 in/8 out: Maximum 8 solenoids
- 4 in/4 out: Maximum 4 solenoids

2 Cylinder port size
CB $\quad$ With ø3.2 one-touch fitting
C4 With $\varnothing 4$ one-touch fitting
C6 With $\varnothing 6$ one-touch fitting
M5 M5 thread
CM $\quad$ Mixed sizes and with port plug
L3 Top ported elbow with $\varnothing 3.2$ one-touch fitting
L4 $\quad$ Top ported elbow with $\varnothing 4$ one-touch fitting
L6 $\quad$ Top ported elbow with $\varnothing 6$ one-touch fitting
L5 $\quad$ M5 thread
B3 Bottom ported elbow with $\varnothing 3.2$ one-touch fitting
B4 $\quad$ Bottom ported elbow with $\varnothing 4$ one-touch fitting
B6 Bottom ported elbow with $\varnothing 6$ one-touch fitting
B5 M5 thread
LM $\quad$ Elbow port, mixed sizes

| MM ${ }^{\text {Note 2) }}$ | Mixed size for different types of piping, option installed |
| :--- | :--- |

Note 1) Indicate the size by means of the manifold specification sheet in case of "CM", "LM", "NM".
Note 2) When selecting the mixed size for different types of piping or dual flow fitting assembly, enter "MM" and give instructions in the manifold specification sheet.
Note 3) Symbols for inch sizes are as follows:
-N1: $\varnothing 1 / 8^{\prime \prime} \quad$ - $\mathrm{N} 3: \varnothing 5 / 32$ "

- NT: $\varnothing 1 / 4^{\prime \prime} \quad$-NM: Mixed

The top ported elbow is $\mathrm{LN} \square$ and
the bottom ported elbow is $\mathrm{BN} \square$.
(4) End plate type
(Enter EX600-compliant S kit only.)

| Nil | Without end plate |
| :---: | :--- |

2 M12 connector power supply (Max. supply current 2A)
$3 \quad 7 / 8$ inch connector power supply (Max. supply current 8 A )
Note) Without SI unit, the symbol is nil.
(6) I/O unit stations
(Enter EX600-compliant S kit only.)

| Nil | None |
| :---: | :---: |
| 1 | 1 station |
| $\vdots$ | $\vdots$ |
| $\vdots$ | $\vdots$ |
| 9 | 9 stations |

Note 1) Without SI unit, the symbol is nil.
Note 2) SI unit is not included in I/O unit stations.
Note 3) When I/O unit is selected, it is shipped
separately, and assembled by customer. Refer to the attached operation manual for mounting method.
7 Number of input blocks
(Enter EX250-compliant S kit only.)

| Nil | Without SI unit/input block (SDO) |
| :---: | :--- |
| $\mathbf{0}$ | Without input block |
| $\mathbf{1}$ | With 1 input block |
| $\vdots$ | $\vdots$ |
| $\vdots$ | $\vdots$ |
| $\mathbf{8}$ | With 8 input blocks |

Note) For the S kit compatible with AS-Interface, the maximum number of stations is limited. Refer to page 6 for details.
8 Input block type
(Enter EX250-compliant S kit only.)

| Nil | Without input block |
| :---: | :--- |
| 1 | M12, |

| $\mathbf{1}$ | M12, 2 inputs |
| :---: | :--- |
| $\mathbf{2}$ | M12, 4 inputs |
| $\mathbf{3}$ | MB, 4 input |

3 MB, 4 inputs (3 pins)

## SI unit COM

| SI unit <br> COM | EX250 integrated-type (I/O) serial transmission system |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

(Enter EX250-compliant S kit only.)

| Nil | PNP sensor input (+ COM) or without input <br> block |
| :---: | :--- |
| N | NPN sensor input (- COM) |

## 10 Option

Nil None

| N Note 2) | All stations with back pressure check valve |
| :---: | :--- |

D With DIN rail (Rail length: Standard)
D $\square$ Note 3) With DIN rail (Rail length: Special)

| K Note 4) | Special wiring spec. (Except double wiring) |
| :--- | :--- |
|  | W |

N With name plate
R Note 5) External pilot
S Note 6) Direct EXH outlet with built-in silencer
Note 1) When two or more symbols are specified, indicate them alphabetically. Example: -BRS
Note 2) When a back pressure check valve is desired, and is to be installed only in certain manifold stations, specify the mounting position by means of the manifold specification sheet
Note 3) For special DIN rail length, indicate "Dロ". (Enter the number of stations inside $\square$.) Example: -D08
In this case, stations will be mounted on a DIN rail for 8 stations regardless of the actual mumbe of manifold stations.
The specified number of stations must be larder than the number of stations on the manifold. Indicate "-DO" for the option without DIN rail.
Note 4) When single wiring and double wiring are mixed, specify wiring type of each station by means of the manifold specification sheet.
Note 5) For external pilot option, "-R", indicate the external pilot specification " R " for the applicable valves as well.
Note 6) Built-in silencer type does not satisfy IP67
Note 7) When changing the specifications of the EX600 from no DIN rail to DIN rail mounting, please consult SMC.
Note 8) When the EX600 "Without SI unit (SD60)" is specified, "With DIN rail (D)" cannot be selected.
Note 9) DIN rail is not attached (but shipped together) on the manifold in case of the EX600 with DIN rail. Refer to back page 5 for mounting method.

* Stations are counted from station 1 on the D-side.

See the Bookmark on left to find the VQC portion of the EX600 Fieldbus catalog

* The maximum number of stations displayed in parentheses is applied to the special wiring specifications. (Option "-K")

Note 1) When selecting SI units with SDTC or SDTD specifications, there are limits to the supply current from the SI unit to the input block or valve. Refer to Best Pneumatics No. (1) for details Note 2) When selecting SI units with SDZCN specifications only, IP40 is compatible. (All other SI units are IP67 compliant.)

How to Order Valves

(A) Type of actuation

(B) Seal

| $\mathbf{0}$ | Metal seal |
| :---: | :--- |
| $\mathbf{1}$ | Rubber seal |

(C) Function

| Nil | Standard (0.4 W) |
| :---: | :--- |
| $\mathbf{B}$ | High-speed response <br> type (0.95 W) |
| $\mathbf{K}^{\text {Note 2) })}$ | High-pressure type <br> (1.0 MPa, 0.95 W$)$ |
| $\mathbf{N}^{\text {Note 3) }}$ | Negative common |
| $\mathbf{R}^{\text {Note 4) }}$ | External pilot |

Note 1) When two or more symbols are specified, indicate them alphabetically. However, combination of " $B$ " and " $K$ " is not possible.
Note 2) Metal seal only
Note 3) When "-COM." is specified for the SI unit, select and mount the valve of negative common.
Note 4) Dual 3-port type is not applicable.
(D) Coil voltage

| 5 Note) | 24 VDC |
| :--- | :--- |
| 6 | 12 VDC |

(F) Manual override

## How to Order Manifold Assembly

Manifold Options Refer to pages 44 through to 46 for details.

Port plug
VVQ1000-58A

DIN rail mounting bracket [-D]
VVQ2000-57A
\{For FLLM/P/S (EX500) kit\}
VVQC2000-57A-S
\{For S (EX250) kit\}
VVQC2000-57A-T (For T kit)

Direct EXH outlet with built-in silencer [-S]

Silencer (For EXH port) AN200-KM10

Elbow fitting assembly VVQ2000-F-L $\square$

## Double check block

VVQ2000-FPG- $\square \square-\square$

Dual flow fitting assembly VVQ2000-52A-N11

Special electrical wiring specifications [-K]

Note 1) Values represented in this column are in the following conditions:
VQC1000: Cylinder port size C6 without a back pressure check valve
VQC2000: Cylinder port size C8 without a back pressure check valve
Note 2) Values represented in this column are based on JIS B 8375-1981 (operating with clean air and a supply pressure of 0.5 MPa . Equipped with light/surge voltage suppressor. Values vary depending on the pressure as well as the air quality.) Values for double type are when the switch is turned ON.

Standard Specifications

|  | Valve type |  | Metal seal | Rubber seal |
| :---: | :---: | :---: | :---: | :---: |
|  | Fluid |  | Air, Inert gas |  |
|  | Maximum operating pressure |  | 0.7 MPa (High-pressure type: 1.0 MPa ) | 0.7 MPa |
|  | Minimum operating pressure | Single | 0.1 MPa | 0.15 MPa |
|  |  | Double | 0.1 MPa |  |
|  |  | 3-position | 0.1 MPa | 0.2 MPa |
|  |  | 4-position | - | 0.15 MPa |
|  | Ambient and fluid temperature |  | -10 to $50^{\circ} \mathrm{C}$ Note 1) |  |
|  | Lubrication |  | Not required |  |
|  | Manual override |  | Push type, Locking type (Tool required) semi-standard |  |
|  | Impact/Vibration resistance |  | 150/30 m/s² Note 2) |  |
|  | Enclosure |  | Dustproof (IP67 compatible) Note 3) |  |
|  | Rated coil voltage |  | 24 VDC |  |
|  | Allowable voltage fluctuation |  | $\pm 10 \%$ of rated voltage |  |
|  | Coil insulation type |  | Equivalent to Class B |  |
|  | Power consumption (Current) | 24 VDC | 0.4 W DC (17 mA), 0.95 W DC (40 mA) Note 4) |  |
|  |  | 12 VDC | 0.4 W DC (34 mA), 0.95 W DC (80 mA) Note 4) |  |

Note 1) Use dry air to prevent condensation when operating at low temperatures.
Note 2) Impact resistance ...... No malfunction resulted from the impact test using a drop impact tester. Test was performed one time each in the axial and right angle directions of the main valve and armature for both energized and de-energized states.
No malfunction occurred in a one-sweep test between 45 and 2000 Hz . Test was performed in the axial and right angle directions of the main valve and armature for both energized and de-energized states.
Note 3) Refer to page 1 and 2 for applicable variations.
Note 4) Value for high-speed response, high-pressure type (0.95 W)

[^5]- Using our D-sub connector for electrical connections greatly reduces labor, while it also minimizes wiring and saves space.
- We use a D-sub connector (25P) that conforms to MIL standards and is therefore widely compatible with many standard commercial models.
- Top or side entry for the connector can be changed freely, allowing for changes even after mounting, to meet any changing needs for space.

- Using our flat ribbon cable for electrical connections greatly reduces labor, while it also minimizes wiring and saves space.
- We use flat ribbon cables whose connectors (26P and 20P) conform to MIL standards, and are therefore widely compatible with many standard commercial models.
- Top or side entry for the connector can be changed freely, allowing for changes even after mounting, to meet any changing needs for space.

## Electrical Wiring Specifications

Cable Assembly
AXT100-FC ${ }_{26}^{20-2}{ }_{3}^{1}$
(Type 26P flat ribbon cable connector assembly can be ordered with (manifolds. Refer to "How to Order Manifold."

Flat ribbon cable connector assembly

| Cable <br> length (L) | 26 P | Assembly part no. |
| :---: | :---: | :---: |
|  | AXT100-FC26-1 | AXT100-FC20-1 |
| 1.5 m | AXT100-FC26-2 | AXT100-FC20-2 |
| 3 m | AXT100-FC26-3 | AXT100-FC20-3 |
| 5 m |  |  |

* When using a standard commercial connector, use a type 26P
connector conforming to MIL-C-83503 or a type 20P with strain relief.
* Cannot be used for transfer wiring.
* Lengths other than the above is also available. Please contact SMC for details.

## Series VQC

## - Series VQC1000/2000 <br> kit (Terminal block box) IP67 compliant

- This kit has a small terminal block inside a junction box. The electrical entry port of a G 3/4 permits connection of conduit fittings.

## Terminal Block Connection

Step 1. Removing the terminal block cover
Loosen the 4 mounting screws (M4) and remove the terminal block cover.

Step 2. The diagram below shows the terminal block wiring. All stations are provided with double wiring regardless of the valves which are mounted.
Connect each wire to the power supply side, according to the markings provided inside the terminal block.

Step 3. Mounting the terminal block cover
Securely tighten the screws to the torque shown in the table below, after confirming that the gasket is installed correctly.

- Applicable crimped terminal: 1.25-3S,1.25Y-3,1.25Y-3N,1.25Y-3.5
- Name plate: VVQ5000-N-T
- Drip-proof plug assembly (for G 3/4): AXT100-B06A

## Electrical Wiring Specifications (IP67 compatible)

## Special Wiring Specifications (Option)

Mixed single and double wiring are available as an option. The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. The total number of solenoids (points) must not exceed 20.

## 1. How to Order

Indicate option symbol " $-K$ " in the manifold part number and be sure to specify station positions for single or double wiring on the manifold specification sheet.

## 2. Wiring specifications

Connector terminal numbers are connected from solenoid station 1 on the A side in the order indicated by the arrows without skipping any terminal numbers.

## VV5QC21

## - Use of circular connectors helps streamline wiring procedure to save labor. <br> - IP67 enclosure is available with use of waterproof circular connectors.

Electrical Wiring Specifications

Double wiring (connected to SOL.A and SOL.B) is used for the internal wiring of each station, regardless of valve and option types. Mixed single and double wiring are available as an option. Refer to the below special wiring specifications (option).

2
Note) When using the negative COM specification, use valves for negative COM.

## Special Wiring Specifications (Option)

Mixed single and double wiring are available as an option. The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. The total number of solenoids (points) must not exceed 24.

Note 1) Please order when reducing the number of manifold stations. When increasing the number of stations, increasing the number of stations, additional orders are not required
since they are included in the since they are includ
manifold block assembly.
Note 2) $\square$ : Stations 02 to 24

## VQC1000：Manifold Optional Parts

## Blanking plate assembly VVQ1000－10A－1 <br> 

It is used by attaching on the manifold block for being pre pared for removing a valve for maintenance reasons or planning to mount a spare valve，etc．

## SUP block plate

## VVQ1000－16A

When different pressures are supplied to a manifold，a SUP block plate is used to block the stations under different pres sures．
＊Specify the mounting position by means of the manifold specification sheet．

## ＜Block indication label＞

Indication labels to confirm the blocking position are attached （Each for SUP passage and SUP／EXH passage blocking pos－ itions）．
＊When ordering a block plate incorporated with a manifold，a block indication label is attached to the manifold．

## Individual EXH spacer

## VVQ1000－R－1－N6

When valve exhaust affects other stations due to the circuit configuration，this spacer is used for individual valve ex－
Block both sides of the individual valve EXH station．（Refer to the application example．）
＊Specify the spacer mounting position，as well as the EXH passage blocking position by means of the manifold spec－ ification sheet．The block plate is used in one or two pla－ ces for one set．
＊An EXH block base assembly is used in the blocking posi－ tion when ordering an EXH spacer incorporated with a manifold．However，do not order an EXH block base as－ sembly because it is attached to the spacer．
When separately ordering an individual EXH spacer，sep－ arately order an EXH block base assembly because it is not attached to the spacer．
＊As a standard，electric wiring is connected to the position of the manifold station where the individual EXH spacer is mounted．
＊If wiring is not required for stations equipped with spacers， enter＂ X ＂in the special wiring specifications column in the manifold specification sheet．

## Individual SUP spacer <br> VVQ1000－P－1－N6

When the same manifold is to be used for different pres－ sures，individual SUP spacers are used as SUP ports for different pressures．（One station space is occupied．）
Block both sides of the station，for which the supply pres－ ． ock plates．（Refer to the application example，
Specify the spacer mounting position and SUP block plate position by means of the manifold specification sheet
The block plate is used in one or two places for one set．
（Two SUP block plates for blocking SUP passage are at－ tached to the individual SUP spacer．）
＊As a standard，electric wiring is connected to the position of the manifold station where the individual SUP spacer is mounted
If wiring is not required for stations equipped with spacers， enter＂ X ＂in the special wiring specifications column in the manifold specification sheet．

VQC1000: Manifold Optional Parts

Blanking plate with a connector for individually outputting electricity to drive a single valve or equipment that are not on the manifold base

* When " $N$ " is suffixed to the end of the name plate, the plate will be different from a standard shape.
Note) Electric current should be 1A or less (including the mounted valves).

EXH block base assembly

## VVQC1000-19A- $\square$-(C3/C4/C6/M5/N1/N3/N7) <br> 

| S | Single wiring |
| :--- | :--- |
| D | Double wiring |

The manifold block assembly is used between stations for which exhaust is desired to be divided when valve exhaust affects other stations due to the circuit configuration. The EXH passage on the D-side is blocked in the EXH block base as sembly. It is also used in combination with an individual EXH spacer for individual exhaust.

## <Block indication label>

Indication labels to confirm the blocking position are attached (Each for EXH passage and SUP/EXH passage blocking positions).

* When ordering this option incorporated with a manifold, a block indication label is attached to the manifold.

* Specify the mounting position by means of the manifold specification sheet.
* When ordering this option incorporated with a manifold,
 specify the EXH block base assembly part number with "*" in front of it beneath the manifold part number.

EXH passage blocked

## Back pressure check valve assembly [-B] VVQ1000-18A

It prevents cylinder from malfunctioning by other valve's exhaust entry. Insert it into R (EXH) port on the manifold side of a valve which is affected. It is effective when a single-acting cylinder is used or an exhaust center type solenoid valve is used.

* When ordering it being mounted on all manifold stations, suffix
"- B " to the end of the manifold part number.
Note) When a back pressure check valve is desired, and is to be installed only in certain manifold stations, clearly indicate the part number and specify the mounting station by means of the manifold specification sheet.

(Precautions)

1. The back pressure check valve assembly is the parts with a check valve structure. However, since the valve has slight air leakage, take precautions for the exhaust air not to be restricted at the exhaust port.
2. When a back pressure check valve is mounted, the effective area of the valve will decrease by about $20 \%$.

## Name plate [-N]

VVQ1000- ${ }^{\mathrm{NC}}$-Station (1 to Max. stations)

It is a transparent resin plate for placing a label that indicates solenoid valve function, etc.
Insert it into the groove on the side of the end plate and bend it as shown in the figure.

* When the blanking plate with connector is mounted, it automatically will be "VVQ1000-NC-n"
* When ordering this option incorporated with a manifold, suffix "- N " to the end of the manifold part number.
$\mathrm{N}:$ Standard
NC: For mounting blanking plate with connector

## Blanking plug (For one-touch fittings) KQ2P- $\square$

It is inserted into an unused cylinder port and SUP/EXH ports. Purchasing order is available in units of 10 pieces.

| Dimensions |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 8 | KQ2P-08 | 20.5 | 39 | 10 | 5/16" | KQ2P-09 | 20. | 39 | 10 |

## Port plug

## VVQ0000－58A

The plug is used to block the cylinder port．
＊When ordering this option incorporated with a manifold，indicate＂CM＂for the port size of the manifold part number，as well as，the mounting position and number of stations and cylinder port mounting positions，4（A）and 2（B）by means of the manifold specification sheet．
＊Gently screw an M3 screw in the port plug hole and pull it for removal．

## Elbow fitting assembly <br> VVQ1000－F－L（C3／C4／C6／M5／N1／N3／N7）

It is used for piping that extends upward or downward from the manifold
＊When ordering this option incorporated with a manifold，indicate＂Lロ＂or
＂B口＂for the manifold port size（when installed in all stations．）
When installing it in part of the manifold stations，specify the elbow fitting as－ sembly part number and the mounting position and number of stations by means of the manifold specification sheet．
＊When mounting elbow fitting assembly on the edge of manifold station and a silencer on EXH port，select a silencer，AN203－KM8．
A silencer（AN200－KM8）is interfered with fittings．

Upward

## DIN rail mounting bracket［－D］ <br> VVQ1000－57A <br> \｛For F／L／M／P／S（EX500）kit\} <br> VVQC1000－57A－S <br> \｛For S（EX250）kit\} <br> VVQC1000－57A－T（For T kit）

It is used for mounting a manifold on a DIN rail．
＊When ordering this option incorporated with a manifold，suffix＂－D＂to the end of the manifold part number．

1 set of DIN rail mounting bracket is used for 1 manifold（2 DIN rail mounting brackets）．

## Direct EXH outlet with built－in silencer［－S］

This is a type with an exhaust outlet atop the manifold end plate．The built－in silencer exhibits an excellent noise suppression effect．（Noise reduction： 30 dB ）
＊When ordering this option incorporated with a manifold，suffix＂－S＂to the end of the manifold part number．

Note）A large quantity of drainage generated in the air source results in exhaust of air together with drainage．
－Refer to back page 5 for maintenance．

## Dual flow fitting assembly

## VVQ1000－52A－C8

This is a fitting to multiply the flow rate by combining the outputs of 2－valve stations． It is used for driving a large bore cylinder．This is a one－touch fitting for a port size of $\varnothing 8$ or $\varnothing 5 / 16$＂．
＊The port size of the manifold part number is＂CM＂．
Clearly indicate the dual flow fitting assembly part number and specify the mount－ ing positions by means of the manifold specification sheet．
＊In dual flow fitting assembly，a special clip which is combined in one－piece of 2 stations is attached as a holding clip．

## Silencer（For EXH port）

This silencer is to be inserted into the EXH port（one－touch fittings）of the common exhaust type．
＊When mounting elbow fitting assembly（VVQ1000－F－LD） on the edge of manifold station，select a silencer，AN203－ KM8．A silencer（AN200－KM8）is interfered with fittings．

## Double check block (Separated) for VQC1000

 VQ1000-FPG- $\square \square$ - $\square$It is used on the outlet side piping to keep the cylinder in the intermediate position for long periods of time. Combining the double check block with a built-in pilot type double check valve and a 3position exhaust center solenoid valve will enable the cylinder to stop in the middle or maintain its position for a long time.
The combination with a 2 -position single/double solenoid valve will permit this block to be used for preventing the dropping at the cylinder stroke end when the SUP residual pressure is released.

## Specifications

| Max. operating pressure | 0.8 MPa |
| :--- | :---: |

## Manifold (DIN rail mounting) <br> VVQ1000-FPG-06

When ordering a double check block, order the DIN rail mounting [-D].
<Ordering example>

Note) When two or more symbols are specified, indicate them alphabetically. Example) -DN

## $\triangle$ Caution

- Air leakage from the pipe between the valve and cylinder or from the fittings will prevent the cylinder from stopping for long periods of time. Check the leakage using neutral household de-
 tergent, such as dish washing soap.
Also, check the cylinder's tube gasket, piston packing and rod packing for air leakage
- Since one-touch fittings allow slight air leakage, screw piping (with M5 thread) is recommended when - Since one-touch fittings allow slight air leakage, screw piping
stopping the cylinder in the middle for long periods of time.
- Combining double check block with 3-position closed center or pressure center solenoid valve will not work.
- M5 fitting assembly is attached, not incorporated into the double check block. After screwing in the

M5 fittings, mount the assembly on the double check block. \{Tightening torque: 0.8 to $1.2 \mathrm{~N} \cdot \mathrm{~m}$ \}

- If the exhaust of the double check block is restricted too much, the cylinder may not operate properly and may not stop intermediately.
- Set the cylinder load so that the cylinder pressure will be within two times that of the supply pressure.

## VQC2000: Manifold Optional Parts

## Blanking plate assembly JIS symbol VVQ2000-10A-1 <br> 

attaching on the manifold block for being pre pared for removing a valve for maintenance reasons or plan ning to mount a spare valve, etc.

Individual SUP spacer

## VVQ2000-P-1- C8 9

When the same manifold is to be used for different pressures, individual SUP spacers are used as SUP ports for different pressures. (One station space is occupied.)
Block both sides of the station, for which the supply pressure from the individual SUP spacer is used, with SUP block plates. (Refer to the application example.)

* Specify the spacer mounting position and SUP passage block ing position by means of the manifold specification sheet
The block plate is used in one or two places for one set.
(Two SUP block plates for blocking SUP passage are attached to the individual SUP spacer.)
* As a standard, electric wiring is connected to the position of the manifold station where the individual SUP spacer is mounted.
* If wiring is not required for stations equipped with spacers, enter " X " in the special wiring specifications column in the manifold specification sheet.

## Individual EXH spacer <br> VVQ2000-R-1-C8

When valve exhaust affects other stations due to the circuit configuration, this spacer is used for individual valve exhaust. (One station space is occupied.)
Block both sides of the individual valve EXH station. (Refer to the application example.)

* Specify the spacer mounting position, as well as the EXH passage blocking position by means of the manifold specifi cation sheet. The block plate is used in one or two places for one set. (Four EXH block plates ( 2 sets) for blocking EXH passage are attached to the individual EXH spacer.)
* As a standard, electric wiring is connected to the position of the manifold station where the individual EXH spacer is mounted.
* If wiring is not required for stations equipped with spacers, enter " $X$ " in the special wiring specifications column in the manifold specification sheet

## SUP block plate

## VVQ2000-16A

When different pressures are supplied to a manifold, a SUP block plate is used to block the stations under different pressures.

Specify the mounting position by means of the manifold specification sheet.

<Block indication label>
Indication labels to confirm the blocking position are attached. (Each for SUP passage and SUP/EXH passage blocking positions)

SUP passage blocked SUP/EXH passage blocked
When ordering a block plate incorporated with a manifold, a block indication label is attached to the manifold.

## EXH block plate <br> VVQ2000-19A

The EXH block plate is used between stations for which exhaust is desired to be divided when valve exhaust affects other stations configuration. It is also used in combination with an individual EXH spacer for individual exhaust.

* Specify the mounting position by means of the manifold specification sheet

## <Block indication label>

Indication labels to confirm the blocking position are attached. (Each for EXH passage and SUP/EXH passage blocking positions)

EXH passage blocked SUP/EXH passage blocked

* When ordering a block plate incorporated with a manifold, a block indication label is attached to the manifold.

## Back pressure check valve assembly [-B]

## VVQ2000-18A

It prevents cylinder malfunction caused by other valve exhaust entry. Insert it into $R(E X H)$ port on the manifold side of a valve which is affected.
It is effective when a single-acting cylinder is used or an exhaust center type solenoid valve is used.

* When ordering this option incorporated with a manifold, suffix "-B" to the end of the manifold part number.
Note) When a back pressure check valve is desired, and is to be installed only in certain manifold stations, clearly indicate the part number and specify the mounting position by means of the manifold specification sheet.

<Precautions>

1. The back pressure check valve assembly is assembly parts with a check valve structure. However, since the valve has sight air leakage, take precautions for the exhaust air not to be restricted at the exhaust port.
2. When a back pressure check valve is mounted, the effective area of the valve will decrease by about $20 \%$.

## Series VQC2000

## VQC2000: Manifold Optional Parts

## Name plate [-N] <br> VVQ2000-N-Station (1 to Max. stations)

t is a transparent resin plate for placing a label that indicates solenoid valve function, etc
Insert it into the groove on the side of the end plate and bend it as shown in the figure.

* When ordering this option incorporated with a manifold suffix "-N" to the end of the manifold part number.

## Blanking plug (For one-touch fittings)

## KQ2P- $\square$

It is inserted into an unused cylinder port and
SUP/EXH ports
Purchasing order is available in units of 10 pieces.

| $3 / 8^{\prime \prime}$ | KQ2P-11 | 22 | 43 | 11.5 |

## Port plug

## VVQ1000-58A

The plug is used to block the cylinder port.

* When ordering this option incorporated with a manifold, indicate "CM" for the port size of the manifold part number, as well as, the mounting station and cylinder port mounting positions, A and B , by means of the manifold specification sheet.

## DIN rail mounting bracket [-D]

VVQC2000-57A
\{For F/L/M/P/S (EX500) kit\}
VVQC2000-57A-S
\{For S (EX250) kit\}
VVQC2000-57A-T (For T kit)

It is used for mounting a manifold on a DIN rail.

* When ordering this option incorporated with a manifold, suffix "-D" to the end of the manifold part number.

1 set of DIN rail mounting bracket is used for 1 manifold (2 DIN rail mounting brackets).

Direct EXH outlet with built-in silencer [-S]
This is a type with an exhaust outlet atop the manifold end plate. The built-in silencer exhibits an excellent noise suppression effect. (Noise reduction: 30 dB )
When ordering this option incorporated with a manifold suffix "-S" to the end of the manifold part number.

Note) A large quantity of drainage generated in the air source results in exhaust of air together with drainage.

- Refer to back page 5 for maintenance.

## Silencer (For EXH port)

This silencer is to be inserted into the EXH port (one-touch fittings).

## Elbow fitting assembly

## VVQ2000-F-L(C4/C6/C8/N3/N7/N9)

It is used for piping that extends upward or downward from the manifold
When installing it only in some manifold stations, specify the elbow fitting assembly part number and the mounting position by means of the manifold specification sheet.

## Dual flow fitting assembly VVQ2000-52A- ${ }^{\mathrm{C} 11}$

This is a fitting to multiply the flow rate by combining the outputs of 2 -valve stations. It is used for driving a arge bore cylinder. This is a one-touch fitting for a port size of $\varnothing 10$ or ø3/8"

,

* The port size of the manifold part number is "CM". Clearly indicate the dual flow fitting assembly part number and specify the mounting position by means of the manifold specifications.

## Double check block（Separated）for VQC2000

## VQ2000－FPG

It is mounted on the outlet side piping to keep the cylinder in the intermediate position for long periods of time．Combining with a 3－position exhaust center solenoid valve will enable the cylinder to stop in the middle or maintain its position for a long time． Combining with a 2 －position single／double solenoid valve will prevent a cylinder from dropping at the stroke end when the residual pressure of SUP is released．

| Rc $1 / 4$ | 12 to 14 |

－If the exhaust of the double check block is restricted too much，the cylinder may not operate properly and may not stop intermediately
Set the cylinder load so that the cylinder pressure will be within two times that of the supply pressure．

## Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC), Japan Industrial Standards (JIS)*1) and other safety regulations*2).
*1) ISO 4414: Pneumatic fluid power - General rules relating to systems.
ISO 4413: Hydraulic fluid power - General rules relating to systems.
IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1992: Manipulating industrial robots - Safety.
JIS B 8370: General rules for pneumatic equipment.
JIS B 8361: General rules for hydraulic equipment.
JIS B 9960-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)
JIS B 8433-1993: Manipulating industrial robots - Safety.
etc.
*2) Labor Safety and Sanitation Law, etc.
$\triangle$ Caution: Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or ..... II
moderate injury.
$\triangle$ Warning: Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.〔. Danger : Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or seriousIinjury.

## $\triangle$ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.
2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.
3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
5. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
6. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
7. An application which could have negative effects on people, property, or animals requiring special safety analysis.
8. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

## $\triangle$ Caution

1．The product is provided for use in manufacturing industries．
The product herein described is basically provided for peaceful use in manufacturing industries．
If considering using the product in other industries，consult SMC beforehand and exchange specifications or a contract if necessary．
If anything is unclear，contact your nearest sales branch．

## Limited warranty and Disclaimer／Compliance Requirements

The product used is subject to the following＂Limited warranty and Disclaimer＂and＂Compliance Requirements＂．
Read and accept them before using the product．

## Limited warranty and Disclaimer

1．The warranty period of the product is 1 year in service or 1.5 years after the product is deliv－ ered．${ }^{* 3}$
Also，the product may have specified durability，running distance or replacement parts．Please consult your nearest sales branch．
2．For any failure or damage reported within the warranty period which is clearly our responsibility， a replacement product or necessary parts will be provided．
This limited warranty applies only to our product independently，and not to any other damage incurred due to the failure of the product．
3．Prior to using SMC products，please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products．
＊3）Vacuum pads are excluded from this 1 year warranty．
A vacuum pad is a consumable part，so it is warranted for a year after it is delivered．
Also，even within the warranty period，the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty．

## Compliance Requirements

When the product is exported，strictly follow the laws required by the Ministry of Economy，Trade and Industry（Foreign Exchange and Foreign Trade Control Law）．

## Series VQC1000/2000 Specific Product Precautions 1

Be sure to read before handling.
Refer to back pages 1 and 2 for Safety Instructions and Handling Precautions for SMC Products (M-E03-3) for 3/4/5 Port Solenoid Valves Precautions.

## Manual Override

## . Warning

Connected actuator is started by manual operation. Use the manual override after confirming that there is no danger. Push type is standard. (Tool required) Locking type is semi-standard. (Tool required)

## Non-locking push type (Tool required)

VQC1000

Push down on the manual override with a small screwdriver until it stops. Release the screwdriver and the manual override will return

Push down on the manual override with a small flat head screwdriver until it stops. Turn it clockwise by $90^{\circ}$ to lock it. Turn it counterclockwise to release it.

Locking type (Manual) <Semi-standard>

VQC1000

VQC2000

Push down on the manual override with a small screwdriver or with your fingers until it stops. Turn it clockwise by $90^{\circ}$ to lock it. Turn it counterclockwise to release it

## $\triangle$ Caution

Do not apply excessive torque when turning the locking type manual override. ( $0.1 \mathrm{~N} \cdot \mathrm{~m}$ or less)

## Series VQC1000／2000 Specific Product Precautions 2

Be sure to read before handling．
Refer to back pages 1 and 2 for Safety Instructions and Handling Precautions for SMC Products（M－E03－3）for 3／4／5 Port Solenoid Valves Precautions．

## Cylinder Port Fittings Replacement

## $\triangle$ Caution

One－touch fittings on the cylinder port are a cassette for easy replacement．The fittings are blocked by a clip．After removing the corresponding valve and take out the clip with a flat head screwdriver，etc．，then re－ place the fittings．
For mounting，insert the fitting until it strikes against the inside wall and then insert the clip to the specified position．

## Series VQC1000/2000 Specific Product Precautions 3

Be sure to read before handling.
Refer to back pages 1 and 2 for Safety Instructions and Handling Precautions for SMC Products (M-E03-3) for 3/4/5 Port Solenoid Valves Precautions.

## How to Mount/Remove DIN Rail

## © Caution

## Removing

1. Loosen the clamp screw on side (a) of the end plate on both sides.
2. Lift side (a) of the manifold base and slide the end plate in the direction of (2) shown in the figure to remove.

## Mounting

1. Hook side (b) of the manifold base on the DIN rail.
2. Press down side (a) and mount the end plate on the DIN rail. Tighten the clamp screw on side (a) of the end plate. The proper tightening torque for screws is 0.4 to $0.6 \mathrm{~N} \cdot \mathrm{~m}$.

## IP67 Enclosure

## $\triangle$ Caution

Wiring connection for models conforming to IP67 should also have enclosures equivalent to or of stricter than IP67.

## Built-in Silencer Element

## $\triangle$ Caution

A filter element is incorporated in the end plate on both sides of the manifold base. A dirty and choked element may reduce cylinder speed or cause malfunction. Clean or replace the dirty element.

Element Part No.

| Type | Element part no. |  |
| :---: | :---: | :---: |
|  | VQC1000 | VQC2000 |
| Direct EXH outlet with <br> built-in silencer | VVQ1000-82A-1 | VVQ2000-82A-1 |

The minimum order quantity is 10 pcs .

Remove the cover from the top of the end plate and remove the old element with a flat head screwdriver, etc.

How to Calculate Flow Rate
Refer to Best Pneumatics No. (1) for obtaining the flow rate.

# Be sure to read before handling． <br> Refer to back pages 1 and 2 for Safety Instructions and Handling Precautions for SMC Products（M－E03－3）for 3／4／5 Port Solenoid Valves Precautions． 

## EX500／EX250／EX126 Precautions

## $\triangle$ Warning

1．These products are intended for use in general factory automation equipment．
Avoid using these products in machinery／equipment which af－ fects human safety，and in cases where malfunction or failure can result in extensive damage．
2．Do not use in explosive environments，in the presence of inflammable gases，or in corrosive environments． This can cause injury or fire．
3．Work such as transporting，installing，piping，wiring，oper－ ation，control and maintenance should be performed by knowledgeable and qualified personnel only．As handling involves the risk of a danger of electrocution，injury or fire．
4．Install an external emergency stop circuit that can promptly stop operation and shut off the power supply．
5．Do not modify these products．Modifications done to these products carry the risk of injury and damage．

## $\triangle$ Caution

1．Read the instruction manual carefully，strictly observe the precautions and operate within the range of the specifications．
2．Do not drop these products or submit them to strong im－ pacts．This can cause damage，failure or malfunction．
3．In locations with poor electrical conditions，take steps to ensure a steady flow of the rated power supply．Use of a voltage outside of the specifications can cause malfunction，damage to the unit，electrocution or fire．
4．Do not touch connector terminals or internal circuit elements when current is being supplied．There is a danger of malfunction，damage to the unit or electro－ cution if connector terminals or internal circuit ele－ ments are touched when current is being supplied．
Be sure that the power supply is OFF when adding or remov－ ing manifold valves or input blocks or when connecting or dis－ connecting connectors．
5．Operate at an ambient temperature that is within the specifications．Even when the ambient temperature range is within the specifications，do not use in loca－ tions where there are rapid temperature changes．
6．Keep wire scraps and other extraneous materials from getting inside these products．This can cause fire，fail－ ure or malfunction．
7．Give consideration to the operating environment de－ pending on the type of enclosure being used．
To achieve IP65 and IP67 protection class，provide appropri－ ate wiring between all units using electrical wiring cables， communication connectors and cables with M12 connectors． Also，provide waterproof caps when there are unused ports， and perform proper mounting of input units，input blocks，SI units and manifold valves．Provide a cover or other protection for applications in which there is constant exposure to water．
8．Use the proper tightening torques．
There is a possibility of damaging threads if tightening ex－ ceeds the tightening torque range．
9．Provide adequate protection when operating in loca－ tions such as follows：
－Where noise is generated by static electricity
－Where there is a strong electric field
－Where there is a danger of exposure to radiation
－When in close proximity to power supply lines

## $\triangle$ Caution

10．When these products are installed in equipment，pro－ vide adequate protection against noise by using noise filters．
11．Since these products are components whose end us－ age is obtained after installation in other equipment， the customer should confirm conformity to EMC direc－ tives for the finished product．
12．Do not remove the name plate．
13．Perform periodic inspections and confirm normal op－ eration，otherwise it may be impossible to guarantee safety due to unexpected malfunction or erroneous operation．

## Safety Instructions on Power Supply

## $\triangle$ Caution

1．Operation is possible with a single power supply or a separate power supply．However，be sure to provide two wiring systems（one for solenoid valves，and one for input and control units）．
2．Use the UL－certified products below for combined direct current power supply．
（1）Circuit in which voltage and current are controlled in accor－ dance with UL508
Circuit which makes the winding wire in the secondary side of the insulation transformer（which meets the following condi－ tions）to be as the power supply
－Maximum voltage（with no load）：
30 Vrms （ 42.4 V at peak）or less
－Maximum current：
1． 8 A or less（including short－circuited）
2．and in case of being controlled by circuit protection devices （fuse，etc）which meets the below rated voltages．

| Voltage with no load（V peak） | Maximum rated current |
| :---: | :---: |
| 0 to $20(\mathrm{~V})$ | 5.0 |
| Exceeding $20(\mathrm{~V})$ up to $30(\mathrm{~V})$ | 100 |
|  | Voltage figure at peak |

（2）Class 2 power supply unit in accordance with UL1310 or circuit（Class 2 circuit）in accordance with UL1585，that is powered by Class 2 transformer with the maximum of 30 Vrms（42．4 V at peak）

## Safety Instructions on Cable

## Caution

1．Avoid miswiring，as this can cause malfunction，dam－ age and fire in the unit．
2．To prevent noise and surge in signal lines，keep all wiring separate from power lines and high－voltage lines．Otherwise，this can cause malfunction．
3．Check wiring insulation，as defective insulation can cause damage to the unit when excessive voltage or current is applied．
4．Do not bend or pull cables repeatedly，and do not place heavy objects on them or allow them to be pin－ ched．This can cause broken lines． Series VQC1000/2000 Specific Product Precautions 5
Be sure to read before handling.
Refer to back pages 1 and 2 for Safety Instructions and Handling Precautions for SMC Products (M-E03-3) for 3/4/5 Port Solenoid Valves Precautions.

## EX600 Precautions

## Design/Selection

## $\triangle$ Warning

1. Use this product within the specification range.

Using beyond the specified specifications range can cause fire, malfunction, or damage to the system.
Confirm the specifications when operating.
2. When using for an interlock circuit:

- Provide a multiple interlock system which is operated by another system (such as mechanical protection function).
- Perform an inspection to check that it is working properly.
This may cause possible injury due to malfunction.

## $\triangle$ Caution

1. Use the UL-certified products below for combined direct current power supply.
(1) Circuit in which voltage and current are controlled in accordance with UL508
Circuit which makes the winding wire in the secondary side of the insulation transformer (which meets the following conditions) to be as the power supply

- Maximum voltage (with no load):

30 Vrms (42.4 V at peak) or less

- Maximum current:

1. 8 A or less (including short-circuited)
2. and in case of being controlled by circuit protection devices (fuse, etc) which meets the below rated voltages.

| Voltage with no load (V peak) | Maximum rated current |
| :---: | :---: |
| 0 to $20(\mathrm{~V})$ | 5.0 |
| Exceeding $20(\mathrm{~V})$ up to $30(\mathrm{~V})$ | $\frac{100}{\text { Voltage figure at peak }}$ |

(2) Class 2 power supply unit in accordance with UL1310 or circuit (Class 2 circuit) in accordance with UL1585, that is powered by Class 2 transformer with the maximum of 30 Vrms (42.4 V at peak)
2. Use this product within the specified voltage range. Using beyond the specified voltage range is likely to cause the units and connecting devices to be damaged or to malfunction.
3. The power supply for the unit should be 0 V as the standard for both power supply for output as well as power supply for control/input.

4. Do not install a unit in a place where it can be used as a foothold.
Applying any excessive load such as stepping on the unit by mistake or placing a foot on it, will cause it to break.
5. Keep the surrounding space free for maintenance. When designing a system, take into consideration the amount of free space needed for performing maintenance.
6. Do not remove the name plate.

Improper maintenance or incorrect use of instruction manual can cause failure and malfunction. Also, there is a risk of losing conformity with safety standards.
7. Beware of inrush current when the power supply is turned on. Some connected loads can apply an initial charge current which will trigger the over current protection function, causing the unit to malfunction.

## Mounting

## © Caution

1. When handling and assembling units:

- Do not touch the sharp metal parts of the connector or plug.
- Do not apply excessive force to the unit.

The connecting portions of the unit are firmly joined with seals.

- When joining units, take care not to get fingers caught between units.
Injury can result.

2. Do not drop, bump, or apply excessive impact.

Otherwise, the unit can become damaged, malfunction, or fail to function.
3. Observe the tightening torque range.

Tightening outside of the allowable torque range will likely damage the product.
IP67 protection class cannot be guaranteed if the screws are not tightened to the specified torque.
4. When lifting a large size manifold solenoid valve unit, take care to avoid causing stress to the valve connection joint.
The connection parts of the unit may be damaged.
Because the unit may be heavy, carrying and installation should be performed by more than one operator to avoid strain or injury.
5. When placing a manifold, mount it on a flat surface.

Torsion in the whole manifold can lead to trouble such as air leakage or defective insulation.

## Wiring

## $\triangle$ Caution

1. Confirm grounding to maintain the safety of the reduced wiring system and for anti-noise performance.
Provide a specific grounding as close to the unit as possible to minimize the distance to grounding.
2. Avoid repeatedly bending or stretching the cable and applying a heavy object or force to it.
Wiring applying repeated bending and tensile stress to the cable can break the circuit.
3. Avoid miswiring.

If miswired, there is a danger of malfunction or damage to the reduced wiring system.
4. Do not wire while energizing the product.

There is a danger of malfunction or damage to the reduced wiring system or input/output equipment.

# Be sure to read before handling． <br> Refer to back pages 1 and 2 for Safety Instructions and Handling Precautions for SMC Products（M－E03－3）for 3／4／5 Port Solenoid Valves Precautions． 

## EX600 Precautions

## Wiring

## $\triangle$ Caution

5．Avoid wiring the power line and high－pressure line in parallel．
Noise or surge produced by signal line resulting from the pow－ er line or high pressure line could cause malfunction．
Wiring of the reduced wiring system or input／output device and the power line or high－pressure line should be separated from each other．
6．Confirm the wiring insulation．
Defective insulation（contact with other circuits，improper insu－ lation between terminals，etc．）may cause damage to the re－ duced wiring system or input／output device due to excessive voltage or current．
7．When a reduced wiring system is installed in ma－ chinery／equipment，provide adequate protection against noise by using noise filters，etc．
Noise in signal lines may cause malfunction．
8．When connecting wires of input／output device or handheld terminal，prevent water，solvent or oil from entering inside from the connecter section．
This can cause damage，equipment failure，or malfunction．
9．Avoid wiring patterns in which excessive stress is applied to the connector．
This may cause malfunction or damage to the unit due to con－ tact failure．

## Operating Environment

## $\triangle$ Warning

1．Do not use in an atmosphere containing an inflam－ mable gas or explosive gas．
Use in such an atmosphere is likely to cause a fire or explo－ sion．This system is not explosion－proof．

## $\triangle$ Caution

1．Select the proper type of enclosure according to the environment of operation．
IP65／67 protection class is achieved when the following condi－ tions are met．
1）The units are connected properly with wiring cable for power supply，communication connector，and cable with M12 connector．
2）Suitable mounting of each unit and manifold valve．
3）Be sure to mount a seal cap on any unused connectors．
If using in an environment that is exposed to water splashes， please take measures such as using a cover．
Also，the Handheld Terminal confirms to IP20，so prevent for－ eign matter from entering inside，and water，solvent or oil from coming in direct contact with it．

## Operating Environment

## $\triangle$ Caution

2．Provide adequate protection when operating in lo－ cations such as the following．
Failure to do so may cause damage or malfunction．
The effect of countermeasures should be checked in individ－ ual equipment and machine．
1）Where noise is generated by static electricity，etc．
2）Where there is a strong electric field
3）Where there is a danger of exposure to radiation
4）When in close proximity to power supply lines
3．Do not use in an environment where oil and chemi－ cals are used．
Operating in environments with coolants，cleaning solvents， various oils or chemicals may cause adverse effects（damage， malfunction）to the unit even in a short period of time．
4．Do not use in an environment where the product could be exposed to corrosive gas or liquid．
This may damage the unit and cause it to malfunction．
5．Do not use in locations with sources of surge gen－ eration．
Installation of the unit in an area around the equipment（elec－ tromagnetic lifters，high frequency induction furnaces，welding machine，motors etc．），which generates the large surge vol－ tage could cause to deteriorate an internal circuitry element of the unit or result in damage．Implement countermeasures against the surge from the generating source，and avoid touching the lines with each other．
6．Use the product type that has an integrated surge absorption element when directly driving a load which generates surge voltage by relay，solenoid valves or lamp．
When a surge generating load is directly driven，the unit may be damaged．
7．The product is CE marked，but not immune to light－ ning strikes．Take measures against lightning strikes in your system．
8．Keep dust，wire scraps and other extraneous mate－ rial from getting inside the product．
This may cause malfunction or damage．
9．Mount the unit in such locations，where no vibration or shock is affected．
This may cause malfunction or damage．
10．Do not use in places where there are cyclic temper－ ature changes．
In case that the cyclic temperature is beyond normal tempera－ ture changes，the internal unit is likely to be adversely effected．
11．Do not use in direct sunlight．
Do not use in direct sunlight．It may cause malfunction or damage．
12．Use this product within the specified ambient tem－ perature range．
This may cause malfunction．
13．Do not use in places where there is radiated heat around it．
Such a place is likely to cause malfunction．

# Series VQC1000/2000 Specific Product Precautions 7 

Be sure to read before handling.
Refer to back pages 1 and 2 for Safety Instructions and Handling Precautions for SMC Products (M-E03-3) for 3/4/5 Port Solenoid Valves Precautions.

## EX600 Precautions

## Adjustment/Operation

## © Warning

1. Do not perform operation or setting with wet hands.

There is a risk of electrical shock.

## <Handheld Terminal>

2. Do not apply pressure to the LCD display.

There is a possibility of the crack of LCD display and injuring.
3. The forced input/output function is used to change the signal status forcibly. When operating this function, be sure to check the safety of the surroundings and installation.
Otherwise, injury or equipment damage could result.
4. Incorrect setting of parameters can cause malfunction. Be sure to check the settings before use.
This may cause injury or equipment damage.

## $\triangle$ Caution

1. Use a watchmaker's screwdriver with thin blade for the setting of each switch of the SI unit.
When setting the switch, do not touch other unrelated parts.
This may cause parts damage or malfunction due to a short circuit.
2. Provide adequate setting for the operating conditions.

Failure to do so could result in malfunction.
Refer to the instruction manual for setting of the switches.
3. For the details of programming and address setting, refer to the manual from the PLC manufacturer.
The content of programming related to protocol is designed by the manufacturer of the PLC used.

## <Handheld Terminal>

4. Do not press the setting buttons with a sharp pointed object.
This may cause damage or malfunction.
5. Do not apply excessive load and impact to the setting buttons.
This may cause damage, equipment failure or malfunction.

When the order does not include the SI unit, the valve plate to connect the manifold and SI unit is not mounted. Use attached valve fixing screws and mount the valve plate.
(Tightening torque: 0.6 to $0.7 \mathrm{~N} \cdot \mathrm{~m}$ )

## Maintenance

## $\triangle$ Warning

1. Do not disassemble, modify (including circuit board replacement) or repair this product.
Such actions are likely to cause injuries or breakage.
2. When an inspection is performed,

- Turn off the power supply.
- Stop the air supply, exhaust the residual pressure in piping and verify that the air is released before performing maintenance work.
Unexpected malfunction of system components and injury can result.

## $\triangle$ Caution

1. When handling and replacing the unit:

- Do not touch the sharp metal parts of the connector or plug.
- Do not apply excessive force to the unit.

The connecting portions of the unit are firmly joined with seals.

- When joining units, take care not to get fingers caught between units.
Injury can result.

2. Perform periodic inspection.

Unexpected malfunction in the system composition devices is likely to occur due to malfunction of machinery or equipment.
3. After maintenance, make sure to perform an appropriate functionality inspection.
In cases of abnormality such as faulty operation, stop operation. Unexpected malfunction in the system composition devices is likely to occur.
4. Do not use benzene and thinner for cleaning units.

Damage to the surface or erasure of the display can result. Wipe off any stains with a soft cloth.
If the stain is persistent, wipe off with a cloth soaked in a dilute solution of neutral detergent and wrung out tightly, and then finish with a dry cloth.

## Series EX600

## Parameters

A parameter is a set value to change the function and operation of the product through a PLC or Handheld Terminal. The desired operation for the customer's application is realized by the set values. There are some parameters that can only be set using the Handheld Terminal of this series.

Manifold solenoid valves

Safety Instructions

## Pieldbus System

These units are capable of connection using a D-sub connector. There are three types of units, for digital input, output, and input/output. The Digital Output Unit can be connected with an SMC manifold solenoid valve $F$ kit (D-sub connector).

Manifold solenoid valve can be connected using cable with D-sub connector.

- Series SY • Series S0700 • Series SJ • Series SQ
- Series SV • Series VQC - Series VQ
* Please limit the number of valve connections to 16 stations for single and 8 stations for double. Refer to the catalog for each product for pin assignment details.

## Connection using spring type terminal block IP40

These terminal block units are compatible with individual wiring configurations. There are three types of units, for digital input, output, and input/output. Wiring connection to a sensor connector box, etc., can be carried out easily using only a flat head screwdriver.

## Analog Input/Output Unit

These units input or output analog (voltage/current) signals. A single unit performs both input and output, allowing feedback control where analog signals are received from a pressure sensor and sent to a pressure controller. Installation space is minimized as well.

## Self Diagnosis Function

In combination with the Handheld Terminal, the following two functions are available.

Short/Open circuit detecting function
It is possible to detect short or open circuit of input device such as an electronic 2 -wire switch and 3 -wire switch and output device such as a solenoid valve. The location of the error can be identified by the indicator light and the network.

Green ON Normal

## Counter function

It is possible to ascertain the maintenance period and identify the parts that require maintenance by an input and output signal ON/OFF counter function. When the counter function is enabled and a certain number of contact operations is reached, the display of counter will flash in red.

Note) The counter function is not provided with the Analog Unit.

## Series EX600

## Individual units can be connected and removed one by one.

A unique clamping method is adopted to prevent screws from falling out.
It is easy to separate the unit just by loosening bracket screws.

## Handheld Terminal

## Forced input and output function

The input and output signals are controlled forcedly without a PLC. The startup time after facility introduction can be shortened.

Password setting function

## Simple operation

Cursor button: Mode and setting change, etc.
Function key: Value and command entry, etc

## Series EX600

## Analog Unit Specifications

EX600-AXA

Analog Input Unit

| Model |  | EX600-AXA |  |
| :---: | :---: | :---: | :---: |
|  | Input type | Voltage input | Current input |
|  | Input connector | M12 (5-pin) socket Note 1) |  |
|  | Input channel | 2 channels (1 channel/connector) |  |
|  | Supplied voltage | 24 VDC |  |
|  | Max. supplied current | 0.5 A/connector |  |
|  | Protection | Short-circuit protection |  |
|  | Input 12 bit resolution <br>   | 0 to $10 \mathrm{~V}, 1$ to $5 \mathrm{~V}, 0$ to 5 V | 0 to $20 \mathrm{~mA}, 4$ to 20 mA |
|  | signal range 16 bit resolution | -10 to $10 \mathrm{~V},-5$ to 5 V | -20 to 20 mA |
|  | Max. rated input signal | $\pm 15 \mathrm{~V}$ | $\pm 22 \mathrm{~mA}$ Note 2) |
|  | Input impedance | $100 \mathrm{k} \Omega$ | $50 \Omega$ |
|  | Linearity ( $77^{\circ} \mathrm{F}$ ) | $\pm 0.05 \%$ F.S. |  |
|  | Repeatability ( $77^{\circ} \mathrm{F}$ ) | $\pm 0.15 \%$ F.S. |  |
|  | Absolute accuracy ( $77^{\circ} \mathrm{F}$ ) | $\pm 0.5 \%$ F.S. | $\pm 0.6 \%$ F.S. |
| Current consumption |  | 70 mA or less |  |
| Enclosure |  | IP67 (Manifold assembly) |  |
| Standards |  | CE marking, UL (CSA), RoHS recognition |  |
| Weight |  | $0.6 \mathrm{lbs}(290 \mathrm{~g})$ |  |

Note 1) M12 (4-pin) connector can be connected.
Note 2) When input signal exceeds 22 mA , the protection function activates and the input signal is interrupted.

Analog Output Unit

| Model |  |  | EX600-AYA |  |
| :---: | :---: | :---: | :---: | :---: |
| Output type |  |  | Voltage output | Current output |
| Output connector |  |  | M12 (5-pin) socket Note) |  |
| Output channel |  |  | 2 channels (1 channel/connector) |  |
|  | Supplied voltage |  | 24 VDC |  |
|  | Max. load current |  | 0.5 A/connector |  |
|  | Protection |  | Short-circuit protection |  |
|  | Output signal range | 12 bit resolution | 0 to $10 \mathrm{~V}, 1$ to $5 \mathrm{~V}, 0$ to 5 V | 0 to $20 \mathrm{~mA}, 4$ to 20 mA |
|  | Load impe | dance | $1 \mathrm{k} \Omega$ or more | $600 \Omega$ or less |
|  | Linearity ( $77^{\circ} \mathrm{F}$ ) |  | $\pm 0.05 \%$ F.S. |  |
|  | Repeatability ( $77^{\circ} \mathrm{F}$ ) |  | $\pm 0.15 \%$ F.S. |  |
| Absolute accuracy ( $77^{\circ} \mathrm{F}$ ) |  |  | $\pm 0.5 \%$ F.S. | $\pm 0.6 \%$ F.S. |
| Current consumption |  |  | 70 mA or less |  |
| Enclosure |  |  | IP67 (Manifold assembly) |  |
| Standards |  |  | CE marking, UL (CSA), RoHS recognition |  |
| Weight |  |  | 0.6 lbs (290 g) |  |

Note) M12 (4-pin) connector can be connected.

## Handheld Terminal

EX600-HT1A- $\square$

| Model | EX600-HT1A- $\square$ |
| :--- | :---: |
| Power supply | Power supplied from SI Unit connector (24 VDC) |
| Current consumption | 50 mA or less |
| Display | LCD with backlight |
| Connection cable | Handheld Terminal cable <br>  <br> Enclosure |
| Standards | (1 m $\cdots$ EX60-AC010-1, 3 m $\cdots$ EX600-AC030-1) |

## Parts Description

## SI Unit

| No. | Description | Use |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Status indication LED | Displays unit status. |
| $\mathbf{2}$ | Indication cover | Open for setting the switch. |
| $\mathbf{3}$ | Indication cover set screw | Loosen for opening the indication <br> cover. |
| $\mathbf{4}$ | Connector (BUS OUT) | Connects to the fieldbus output cable. |
| $\mathbf{5}$ | Marker groove | Can be used to mount a marker. |
| $\mathbf{6}$ | Connector (PCI) | Connects to the Handheld <br> Terminal cable. |
| $\mathbf{7}$ | Valve Plate mounting holes | Fixes Valve Plate in place. |
| $\mathbf{8}$ | Valve Plate mounting groove | Inserts Valve Plate. |
| $\mathbf{9}$ | Joint bracket | Links units to one another. |
| $\mathbf{1 0}$ | Connector for unit (Plug) | Transmits signals to the neighboring <br> unit and supplies power. |
| $\mathbf{1 1}$ | Connector (BUS IN) | Connects to the cable for fieldbus <br> input. |
| $\mathbf{1 2}$ | MAC address name plate | Displays a unique 12-digit MAC <br> address for each SI Unit. |
| $\mathbf{1 3}$ | Seal cap | Mounted on the connectors (BUS OUT <br> and PCI) at the time of shipment. |

## Handheld Terminal

| No. | Description | Use |
| :---: | :---: | :---: |
| 1 | LCD | Displays operation and unit information. |
| 2 | Connector | Connects to the Handheld Terminal cable. |
| 3 | Handheld Terminal cable | Connects the SI Unit to the Handheld Terminal. |
| 4 | Enter button ( © (ex) | From the selection screen, goes to the screen for the item selected. On the settings screen, registers the settings that have been made so far. |
| 5 | Cursor button ( $\cap \vee \boxed{~) ~}$ | Moves the cursor on the LCD up, down, left or right. <br> Moves the cursor on the selection screen up, down, left or right to make selections. <br> On the settings screen, increases or decreases the value of settings or turns settings on and off. |
| 6 | F2 button ( ${ }^{2}$ ) | Functions in accordance with on-screen display or instructions. |
| 7 | F1 button ( $\quad$ ) | Functions in accordance with on-screen display or instructions. |
| 8 | Escape button ( ${ }^{\text {Sce }}$ ) | On the selection screen, goes back to the previous screen. On the settings screen, cancels the settings that have been made so far and goes back to the previous screen. |
| 9 | ERROR LED | Lights up red when the EX600 diagnosis errors occur. |
| 10 | POWER LED | Connects to the EX600 SI Unit, and lights up green when control/input power supply is on. |

## Digital Unit

| No. | Description | Use |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Status indication LED | Displays unit status. |
| $\mathbf{2}$ | Connector | Connects with input or output devices. |
| $\mathbf{3}$ | Marker groove | Can be used to mount a marker. |
| $\mathbf{4}$ | Lock screw | Fixes the D-sub connector in place. <br> (No.4-40 UNC) |
| $\mathbf{5}$ | Joint bracket | Links units to one another. |
| $\mathbf{6}$ | Connector for unit (Plug) | Transmits signals to the neighboring <br> unit and supplies power. | EX600-DY $\square B$

## Analog Unit

| No. | Description | Use |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Status indication LED | Displays unit status. |
| $\mathbf{2}$ | Connector | Connects with input or output devices. |
| $\mathbf{3}$ | Marker groove | Can be used to mount a marker. |
| $\mathbf{4}$ | Joint bracket | Links units to one another. |
| $\mathbf{5}$ | Connector for unit (Plug) | Transmits signals to the neighboring <br> unit and supplies power. |

## End Plate

| No. | Description | Use |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Power connector | Supplies power to the unit and/or <br> input/output devices. |
| $\mathbf{2}$ | Fixing hole for direct <br> mounting | Connects directly to equipment. |
| $\mathbf{3}$ | Fixing hole for DIN rail | Converts to manifold or for DIN rail <br> mounting. |
| $\mathbf{4}$ | FE terminal | Connects for grounding to FE <br> (Functional Earth). |
| $\mathbf{5}$ | Connector (Unused) | This connector has not yet been used. <br> Do not remove the seal cap. |

## Analog Unit

EX600-AXA EX600-AYA

## Series EX600

## Accessories

## End Plate bracket

This bracket is used for the End Plate of DIN rail mounting.

EX600-ZMA2

## Enclosed parts

Round head screw (M4 x 20) 1 pc.
P-tight screw ( $4 \times 14$ )

EX600-ZMA3
(Specialized for Series SY)

## Enclosed parts

Round head screw with washer (M4 x 20) 1 pc.
P-tight screw ( $4 \times 14$ )

## (2) Valve Plate

EX600-ZMV1

Enclosed parts
Round head screw (M4 x 6) 2 pcs.
Round head screw (M3 $\times 8$ ) 4 pcs.

EX600-ZMV2
(Specialized for Series SY)

## Enclosed parts

Round head screw (M4 x 6) 2 pcs.
Round head screw (M3 x 8) 4 pcs.

## Reinforcing brace

This bracket is used on the bottom of the unit at the intermediate position for connecting 6 units or more.

For direct mounting EX600-ZMB1

Enclosed parts
Round head screw (M4 x 5) 2 pcs.

For DIN rail mounting EX600-ZMB2

Enclosed parts
Round head screw (M4 x 6) 2 pcs.

## Seal cap (10 pcs.)

The seal cap needs to be placed the unused I/O connector.
The specified protection cannot be maintained.

## Marker (1 sheet, 88 pcs.)

The signal name of I/O device and each unit address can be entered and mounted on each unit.

EX600-ZT1

## $7 / 8$ inch connector and its related parts

- Fieldwireable 7/8 inch connector [compatible to AWG22-16]
PCA-1578078

Plug
PCA-1578081
Socket

## SPEEDCON and Its Related Parts

Power supply cable with M12 connector (5-pin B-coded)

| PCA-1564927 | Straight 2 m |
| :--- | :--- |
| PCA-1564930 | Straight 6 m |
| PCA-1564943 | Right angle 2 m |
| PCA-1564969 | Right angle 6 m |

Note) For M12 connector, description of B-coded for a reverse type is used as a connector shape.

## 8 Communication cable with connector/ Communication connector

For EtherNet/IPTM and EtherCAT

- Communication cable (with connector on one end only)
Straight 5 m
PCA-1446566

- Fieldwireable connector plug

PCA-1446553

The communication cable with connector and the communication connector that can be used on this series other than EtherNet/IP ${ }^{\mathrm{TM}}$ and EtherCAT are found in the M8/M12 connector catalog.

## (9) I/O cable with connector/ I/O connector

The I/O cable with connector and I/O connector that can be used on this series are found in the M8/M12 connector catalog (ES100-73).

## Series EX600

## Table of Mountable Units

The units that can be connected differ depending on the product number.
Before mounting, please be sure to confirm the types of units that can be connected.

# For Series EX600 

Note 1) When two or more symbols are specified, indicate them alphabetically. Example) "-BRS"
Note 2) When the back pressure check valve is used only for specified station, specify the back pressure check valve part number, and specify the station number to which the valve is mounted, on the manifold specification sheet.

| C3 | With ø3.2 One-touch fitting |
| :--- | :--- |
| C4 | With ø4 One-touch fitting |
| C6 | With ø6 One-touch fitting |
| M5 | M5 thread |
| CM | Mixed sizes and with port plug |
| L3 | Top ported elbow with ø3.2 One-touch fitting |
| L4 | Top ported elbow with ø4 One-touch fitting |
| L6 | Top ported elbow with ø6 One-touch fitting |
| L5 | M5 thread |
| B3 | Bottom ported elbow with ø3.2 One-touch fitting |
| B4 | Bottom ported elbow with ø4 One-touch fitting |
| B6 | Bottom ported elbow with ø6 One-touch fitting |
| B5 | M5 thread |
| LM | Mixed port sizes of elbow piping |

Note 1) Indicate the sizes on the manifold specification sheet in the case of "CM" and "LM".
Note 2) Symbols for inch size are as follows.

- N1: ø1/8"
- N3: ø5/32"
- N7: ø1/4"
- NM: Mixed sizes

The top ported elbow is $\mathrm{LN} \square$ and the bottom ported elbow is $\mathrm{BN} \square$. For NM, specify it on the manifold specification sheet.

Kit type

| Kit type | Symbol | Specifications | Stations | Max. number of stations for special wiring specifications | Max. number of solenoids |
| :---: | :---: | :---: | :---: | :---: | :---: |
| S kit | SD60 | Without SI Unit | 1 to 12 stations | 24 stations | 24 |
|  | SD6Q | For DeviceNet ${ }^{\text {TM }}$ |  |  |  |
|  | SD6N | For PROFIBUS DP |  |  |  |
|  | SD6V | For CC-Link |  |  |  |
|  | SD6ZE | For EtherNet/IP ${ }^{\text {TM }}$ |  |  |  |
|  | SD6D | For EtherCAT |  |  |  |

Note) Max. number of stations depends on the number of solenoids.
Add the option symbol " K " when the combination of single wiring and double wiring is specified.

- When "Without SI Unit" is specified, I/O Unit cannot be mounted.
- When "Without SI Unit" is specified, Valve Plate to connect the manifold and SI Unit is not mounted. Refer to page 51 for mounting method.

Refer to the catalog of each series for details on
I ) Specified station number shall be longer than manifold station number.
Note 4) When single wiring and double wiring are mixed, specify wiring type of each station on the manifold specification sheet.
Note 5) When the external pilot type is selected, also specify the external pilot type for valves.
Note 6) Built-in silencer type dose not satisfy IP67.
Note 7) When specification change from no DIN rail type to DIN rail mounting type, please consult SMC.
Note 8) When "Without SI Unit (SD60)" is specified, "With DIN rail (D)" cannot be selected.
Note 9) DIN rail is not attached (but shipped together) on the manifold in the case of with DIN rail. Refer to the VQC series catalog (CAT.ES11101) for mounting method.

## - I/O Unit stations

| Nil | None |
| :---: | :---: |
| 1 | 1 station |
| $\vdots$ | $\vdots$ |
| 9 | 9 stations |

Note 1) Without SI Unit, the symbol is nil.
Note 2) SI Unit is not included in I/O Unit stations.
Note 3) When I/O Unit is selected, it is shipped separately and
assembled by customer.
Refer to the attached operation manual for mounting method.
Note 4) Refer to page 50 for details on enclosure.

## •SI Unit common

| $\mathbf{N i l}$ | Positive common |
| :---: | :---: |
| $\mathbf{N}$ | Negative common |

Note) Without SI Unit, the symbol is nil.

- End Plate type

| Nil | No End Plate |
| :---: | :--- |
| $\mathbf{2}$ | Power supply with M12 connector (Max. supplied current 2 A) |
| $\mathbf{3}$ | Power supply with 7/8 inch connector (Max. supplied current 8 A) |

# For Series EX600 <br> C Series VQC4000 

RoHS

How to Order Manifold

Note) Without SI Unit, the symbol is nil.

Note) Max. number of stations depends on the number of solenoids.
Add the option symbol " $-K$ " when the combination of single wiring and double wiring is specified.

- When "Without SI Unit" is specified, I/O Unit cannot be mounted.
- When "Without SI Unit" is specified, Valve Plate to connect the manifold and SI Unit is not mounted. Refer to page 51 for mounting method.

Refer to the catalog of each series for details on
manifold solenoid valve specifications, Common
Precautions and Specific Product Precautions.

How to Order Valves

## Series VQC4000

Dimensions
Power supply with M12 connector

## Formulas

L1 $=25 \mathrm{n}+106$
L2 $=25 n+184$

* L2 is the dimension without I/O Unit. Add 47 mm for each additional I/O Unit s.
* " $m$ " is number of I/O Units.

## Dimensions

n : Stations (Maximum 16 stations) (mm)
Dimensions

| L | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ | $\mathbf{1 3}$ | $\mathbf{1 4}$ | $\mathbf{1 5}$ | $\mathbf{1 6}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{L} \mathbf{1}$ | 131 | 156 | 181 | 206 | 231 | 256 | 281 | 306 | 331 | 356 | 381 | 406 | 431 | 456 | 481 | 506 |
| $\mathbf{L} 2$ | 209 | 234 | 259 | 284 | 309 | 334 | 359 | 384 | 409 | 434 | 459 | 484 | 509 | 534 | 559 | 584 |

## Power supply with $7 / 8$ inch connector

Formulas
L1 $=25 \mathrm{n}+106$
L2 $=25 n+184$

* L2 is the dimension without I/O Unit. Add 47 mm for each additional I/O Unit s.
* " m " is number of $\mathrm{I} / \mathrm{O}$ Units.

## Dimensions

n : Stations (Maximum 16 stations) (mm)

| L | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ | $\mathbf{1 3}$ | $\mathbf{1 4}$ | $\mathbf{1 5}$ | $\mathbf{1 6}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{L} \mathbf{1}$ | 131 | 156 | 181 | 206 | 231 | 256 | 281 | 306 | 331 | 356 | 381 | 406 | 431 | 456 | 481 | 506 |
| $\mathbf{L} 2$ | 209 | 234 | 259 | 284 | 309 | 334 | 359 | 384 | 409 | 434 | 459 | 484 | 509 | 534 | 559 | 584 |

Series EX600 Specific Product Precautions 1

Be sure to read this before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" for $3 / 4 / 5$ Port Solenoid Valve Precautions. The Operation Manual can be downloaded from the SMC website, http://www.smcworld.com

## Design/Selection

## $\triangle$ Warning

1. Use this product within the specification range.

Using beyond the specified specifications range can cause fire, malfunction, or damage to the system.
Check the specifications before operation.
2. When using for an interlock circuit:

- Provide a multiple interlock system which is operated by another system (such as mechanical protection function).
- Perform an inspection to confirm that it is working properly.
This may cause possible injury due to malfunction.

## $\triangle$ Caution

1. When applicable to UL, use a Class 2 power supply unit conforming to UL1310 for direct current power supply.
2. Use this product within the specified voltage range. Using beyond the specified voltage range is likely to cause the units and connecting devices to be damaged or to malfunction.
3. The power supply for the unit should be 0 V as the standard for both power supply for output as well as power supply for control/input.

4. Do not install a unit in a place where it can be used as a foothold.
Applying any excessive load such as stepping on the unit by mistake or placing a foot on it, will cause it to break.
5. Keep the surrounding space free for maintenance.

When designing a system, take into consideration the amount of free space needed for performing maintenance.
6. Do not remove the name plate.

Improper maintenance or incorrect use of operation manual can cause failure and malfunction. Also, there is a ri sk of losing conformity with safety standards.
7. Beware of inrush current when the power supply is turned on.
Some connected loads can apply an initial charge current which will trigger the over current protection function, causing the unit to malfunction.

## Mounting

## © Caution

1. When handling and assembling units:

- Do not touch the sharp metal parts of the connector or plug.
- Do not apply excessive force to the unit when disassembling.
The connecting portions of the unit are firmly joined with seals.
- When joining units, take care not to get fingers caught between units.
Injury can result.

## Mounting

## ©Caution

2. Do not drop, bump, or apply excessive impact.

Otherwise, the unit can become damaged, malfunction, or fail to function.
3. Observe the tightening torque range.

Tightening outside of the allowable torque range will likely damage the screw.
IP67 cannot be guaranteed if the screws are not tightened to the specified torque.
4. When lifting a large size manifold solenoid valve unit, take care to avoid causing stress to the valve connection joint.
The connection parts of the unit may be damaged.
Because the unit may be heavy, carrying and installation should be performed by more than one operator to avoid strain or injury.
5. When placing a manifold, mount it on a flat surface.

Torsion in the whole manifold can lead to trouble such as air leakage or defective insulation.

## -

## © Caution

1. Check the grounding to maintain the safety of the reduced wiring system and for anti-noise performance.
Provide a specific grounding as close to the unit as possible to minimize the distance to grounding.
2. Avoid repeatedly bending or stretching the cable and applying a heavy object or force to it.
Wiring applying repeated bending and tensile stress to the cable can break the circuit.

## 3. Avoid miswiring.

If miswired, there is a danger of malfunction or damage to the reduced wiring system.
4. Do not wire while energizing the product.

There is a danger of malfunction or damage to the reduced wiring system or input/output device.
5. Avoid wiring the power line and high pressure line in parallel.
Noise or surge produced by signal line resulting from the power line or high pressure line could cause malfunction.
Wiring of the reduced wiring system or input/output device and the power line or high pressure line should be separated from each other.
6. Check the wiring insulation.

Defective insulation (contact with other circuits, improper insulation between terminals, etc.) may cause damage to the reduced wiring system or input/output device due to excessive voltage or current.

## Wiring

## $\triangle$ Caution

7. When a reduced wiring system is installed in machinery/equipment, provide adequate protection against noise by using noise filters, etc.
Noise in signal lines may cause malfunction.
8. When connecting wires of input/output device or Handheld Terminal, prevent water, solvent or oil from entering inside from the connecter section.
This can cause damage, equipment failure or malfunction.
9. Avoid wiring patterns in which excessive stress is applied to the connector.
This may cause malfunction or damage to the unit due to contact failure.

## Operating Environment

## Warning

1. Do not use in an atmosphere containing an inflammable gas or explosive gas.
Use in such an atmosphere is likely to cause a fire or explosion. This system is not explosion-proof.

## $\triangle$ Caution

1. Select the proper type of enclosure according to the environment of operation.
IP65/67 is achieved when the following conditions are met.
1) Provide appropriate wiring between all units using electrical wiring cables, communication connectors and cables with M12 connectors.
2) Suitable mounting of each unit and manifold valve.
3) Be sure to mount a seal cap on any unused connectors.

If using in an environment that is exposed to water splashes, please take measures such as using a cover.
When the enclosure is IP40, do not use in an operating environment or atmosphere where it may come in contact with corrosive gas, chemical agents, seawater, water, or water vapor. When connected to the EX600-DGDE or EX600$\mathrm{D} \square \square \mathrm{F}$, manifold enclosure is IP40.
Also, the Handheld Terminal conforms to IP20, so prevent foreign matter from entering inside, and water, solvent or oil from coming in direct contact with it.
2. Provide adequate protection when operating in locations such as the following.
Failure to do so may cause damage or malfunction.
The effect of countermeasures should be checked in individual equipment and machine.

1) Where noise is generated by static electricity, etc.
2) Where there is a strong electric field
3) Where there is a danger of exposure to radiation
4) When in close proximity to power supply lines

## Operating Environment

## $\triangle$ Caution

3. Do not use in an environment where oil and chemicals are used.
Operating in environments with coolants, cleaning solvents, various oils or chemicals may cause adverse effects (damage, malfunction) to the unit even in a short period of time.
4. Do not use in an environment where the product could be exposed to corrosive gas or liquid.
This may damage the unit and cause it to malfunction.
5. Do not use in locations with sources of surge generation.
Installation of the unit in an area around the equipment (electromagnetic lifters, high frequency induction furnaces, welding machine, motors, etc.), which generates the large surge voltage could cause to deteriorate an internal circuitry element of the unit or result in damage. Implement countermeasures against the surge from the generating source, and avoid touching the lines with each other.
6. Use the product type that has an integrated surge absorption element when directly driving a load which generates surge voltage by relay, solenoid valves or lamp.
When a surge generating load is directly driven, the unit may be damaged.
7. The product is CE marked, but not immune to lightning strikes. Take measures against lightning strikes in your system.
8. Keep dust, wire scraps and other extraneous material from getting inside the product.
This may cause malfunction or damage.
9. Mount the unit in such locations, where no vibration or shock is affected.
This may cause malfunction or damage.
10. Do not use in places where there are cyclic temperature changes.
In case that the cyclic temperature is beyond normal temperature changes, the internal unit is likely to be adversely effected.
11. Do not use in direct sunlight.

Do not use in direct sunlight. It may cause malfunction or damage.
12. Use this product within the specified ambient temperature range.
This may cause malfunction.
13. Do not use in places where there is radiated heat around it.
Such a place is likely to cause malfunction.

Series EX600 Specific Product Precautions 3
Be sure to read this before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" for $3 / 4 / 5$ Port Solenoid Valve Precautions. The Operation Manual can be downloaded from the SMC website, http://www.smcworld.com

## Adjustment/Operation

## © Warning

1. Do not perform operation or setting with wet hands.

There is a risk of electrical shock.

## <Handheld Terminal>

2. Do not apply pressure to the LCD.

There is a possibility of the crack of LCD and injuring.
3. The forced input/output function is used to change the signal status forcibly. When operating this function, be sure to check the safety of the surroundings and installation.
Otherwise, injury or equipment damage could result.
4. Incorrect setting of parameters can cause malfunction.

Be sure to check the settings before use.
This may cause injury or equipment damage.

## © Caution

1. Use a watchmakers' screwdriver with thin blade for the setting of each switch of the SI Unit.
When setting the switch, do not touch other unrelated parts.
This may cause parts damage or malfunction due to a short circuit.
2. Provide adequate setting for the operating conditions.

Failure to do so could result in malfunction.
Refer to the operation manual for setting of the switches.
3. For details on programming and address setting, refer to the manual from the PLC manufacturer.
The content of programming related to protocol is designed by the manufacturer of the PLC used.

## <Handheld Terminal>

4. Do not press the setting buttons with a sharp pointed object.
This may cause damage or malfunction.
5. Do not apply excessive load and impact to the setting buttons.
This may cause damage, equipment failure or malfunction.

## Maintenance

## © Warning

1. Do not disassemble, modify (including circuit board replacement) or repair this product.
Such actions are likely to cause injuries or breakage.
2. When an inspection is performed,

- Turn off the power supply.
- Stop the air supply, exhaust the residual pressure in piping and verify that the air is released before performing maintenance work.
Unexpected malfunction of system components and injury can result.

## $\triangle$ Caution

1. When handling and replacing the unit:

- Do not touch the sharp metal parts of the connector or plug.
- Do not apply excessive force to the unit when disassembling.
The connecting portions of the unit are firmly joined with seals.
- When joining units, take care not to get fingers caught between units.
Injury can result.

2. Perform periodic inspection.

Unexpected malfunction in the system composition devices is likely to occur due to malfunction of machinery or equipment.
3. After maintenance, make sure to perform an appropriate functionality inspection.
In cases of abnormality such as faulty operation, stop operation. Unexpected malfunction in the system composition devices is likely to occur.
4. Do not use benzene and thinner for cleaning units.

Damage to the surface or erasure of the display can result. Wipe off any stains with a soft cloth.
If the stain is persistent, wipe off with a cloth soaked in a dilute solution of neutral detergent and wrung out tightly, and then finish with a dry cloth.

## Other

## $\triangle$ Caution

1. Refer to the catalog of each series for Common Precautions and Specific Product Precautions on manifold solenoid valves.

[^8]$\triangle$ Safety Instructions
These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

## $\triangle$ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications. Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.
2. Only personnel with appropriate training should operate machinery and equipment.
The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.
3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
4. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
5. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
6. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
7. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
8. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
9. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
10. An application which could have negative effects on people, property, or animals requiring special safety analysis.
11. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.
12. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

## Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

## Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

## *2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

## Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

## Fieldbus System

(Output device for driving 5 port solenoid valves)

Series EX260
CAT.NASO2-25B

Manifold length is shortened by the small fieldbus output module (SI unit).

Wiring and piping from the same direction is possible. (for side ported)
Effective for installation in locations where space is limited above the valve.

External branch connector is not necessary. Daisy-chain wiring is possible. Reduced wiring space

External terminating resistor is not necessary. (Only available for M12 PROFIBUS DP, CC-Link communication connectors)
ON/OFF switching is possible with an internal terminating resistor. External terminating resistor is not necessary.

Fieldbus

Product Specification Variations

|  |  | Devicenet | CC-Link |  | Ethervetipe | Ethercat. ${ }^{\text {\% }}$ |

| Communication connector |  | M12 | M12 | M12 | M12 | M12 |

## Communication connector examples

Series SY3000/5000

## Valve piping direction variations

Mixed mounting of top ported and side ported is possible.

By mounting top ported valves on side ported and bottom ported type manifolds, it is possible to detect the output of the A/B port with a pressure switch.

## Valves can be freely connected up to 24 stations.

It is possible to connect only the number of valves required, from 1 to 24 stations, to suit the application. (Maximum number of solenoids connected: 32)

Mixed valve sizes manifold
Valves of different sizes, SY3000 and SY5000, can be mounted on the same manifold.

Series S0700
7 mm width valves can be connected.

## Applicable Valve Series

It is possible to connect only the number of 7 mm width valves required, from 1 to 24 stations.
(Maximum number of solenoids connected: 32)

(3) Seal cap: For M12 connector socket

Use this on ports that are not being used for communication connector (M12 connector socket).
Use of this seal cap maintains the integrity of the IP67 enclosure.
Note) Tighten the seal cap with the prescribed tightening torque. (For M12: $0.07 \mathrm{lbf} . f \mathrm{ft}(0.1 \mathrm{~N} \cdot \mathrm{~m})$

| $\mathbf{0 2}$ | 2 stations | Specified layout Note 2) <br> $\vdots$ |
| S |  | (Available up to 16 solenoids) |

Note 1) Double wiring: 2-position single, double, 3-position and 4-position valves can be used on all manifold stations.
Use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
Note 2) Specified layout: Indicate the wiring specifications on the manifold specification sheet.
(Note that 2-position double, 3-position and 4 -position valves cannot be used where single wiring has been specified.)
Note 3) Includes the number of blanking plate assemblies.
Note 4) For the model without the SI unit (S0), note the maximum number of solenoids of the SI unit that will be mounted. If the layout is specified, indicate it on the manifold specification sheet.

Nil $\quad$ Positive common Note 1) Ensure a match with the common specifications of the valve to be used. $\mathbf{N}$ Negative common Note 2) Without SI unit, the symbol is nil.

8 A, B port size (Metric)

| Symbol | A, B port |  |  | Type 10/Side ported |  | $\begin{array}{\|c\|} \hline \text { Type 11/ } \\ \text { Bottom ported } \\ \hline \end{array}$ |  |

| B6 |  |  | ø6 One-touch fitting | - | - | - |  |
| B8 |  |  | ø8 One-touch fitting | - | - | - |  |
| LM* |  |  | ow port, mixed sizes uding upward and downward piping) | $\bigcirc$ | - | - |  |
| P, E port size (One-touch fittings) |  |  |  | $\varnothing 8$ | $\varnothing 10$ | $\varnothing 10$ |  |

Note) To avoid interference with the body or piping, select downward elbow port when mounting the optional spacer assembly (Refer to the SY3000/ 5000
7 series catalog (CAT. NAS11-103)).

## A, B port size (Inch)

How to Order Manifold Assembly

| SS5Y3-10SNAN-04D-C6 ...1 1 set (Type 104 -station manifold base part no.) |  |
| :---: | :---: |
| *SY3100-5U1 | ...... 2 sets (2-position single part no.) |
| *SY3200-5U1 |  |
| *SY3300-5U1 | ....... 1 set (3-position closed center part no.) |
| *The as *Prefix | risk denotes the symbol for assembly. o the part nos. of the valve, etc. |

- The valve arrangement is numbered as the 1 st station from the $D$ side.
- Under the manifold part number, state the valves to be mounted in order from the 1st station as shown in the figure above.
If the arrangement becomes complicated, specify on a manifold specification sheet.
Note) When mixing top ported configurations, select from page 13. Specify on a manifold specification sheet if plugs are required on the A and $B$ port on the manifold.

## How to Order Valves (With two mounting screws)

Refer to the SY3000/5000 series catalog
(CAT.NAS11-103) for details on valve specifications.

## (2) Type of actuation

| $\mathbf{1}$ | 2-position single |
| :---: | :---: |
| $\mathbf{2}$ | 2-position double |
| $\mathbf{3}$ | 3-position closed center |
| $\mathbf{4}$ | 3-position exhaust center |
| $\mathbf{5}$ | 3-position pressure center |
| $\mathbf{A}^{*}$ | 4-position dual 3-port valve (N.C./N.C.) |
| $\mathbf{B}^{*}$ | 4-position dual 3-port valve (N.O./N.O.) |
| $\mathbf{C}^{*}$ | 4-position dual 3-port valve (N.C./N.O.) |

* Only rubber seal type is available for the 4-position dual 3-port valve.

## Seal type

| $\mathbf{0}$ | Rubber seal |
| :---: | :---: |
| $\mathbf{1}$ | Metal seal |

(4) Pilot type

| $\mathbf{N i l}$ | Internal pilot |
| :---: | :---: |
| $\mathbf{R}$ | External pilot |

## (5) Back pressure check valve

 (Built-in valve type)| Nil | None |
| :---: | :---: |
| $\mathbf{H}$ | Built-in |

* Only rubber seal type.

Manifold installed type is available if the back pressure check valve is required for a valve with metal seal. Refer to the SY3000/5000 series catalog (CAT.NAS11-103) for details. However, it is not recommended to use the built-in valve type and the manifold installed type at the same time because it will reduce the flow.

* The built-in valve type back pressure check valve is not available for the 3-position type.
(6) Pilot valve option

| Nil | Standard (0.7 MPa) |
| :---: | :---: |
| $\mathbf{B}$ | Quick response type $(0.7 \mathrm{MPa})$ |
| $\mathbf{K}^{*}$ | High pressure type $(1.0 \mathrm{MPa})$ |

* Only metal seal type is available for the high pressure type.
7 Coil type

| Nil | Standard |
| :---: | :---: |
| $\mathbf{T}$ | With power saving circuit (Continuous duty type) |

* Be sure to select the power saving circuit type when a valve is continuously energized for long periods of time. * Note the specified energizing time when power saving circuit is selected.

## 8 Rated voltage

5 24 VDC
(9) Light/surge voltage suppressor and common specification

| R | With surge voltage suppressor (Non-polar) |
| :---: | :--- |
| U | With light/surge voltage suppressor (Non-polar) |
| S | With surge voltage suppressor (Positive common) |
| Z | With light/surge voltage suppressor (Positive common) |
| NS | With surge voltage suppressor (Negative common) |
| NZ | With light/surge voltage suppressor (Negative common) |

* Only "Z" and "NZ" types are available for the product with power saving circuit. Select a valve from R, U, S or $Z$ when the SI unit output polarity is Nil (Positive common). Select a valve from R, U, NS or NZ when the SI unit output polarity is N (Negative common).

* For "K" and " H ", the valve body cover has a drop prevention construction to stop the mounting screws from falling out when the valve is removed for maintenance etc.
* When ordering a valve individually, the base gasket is not included. Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance service. Refer to the SY3000/5000 series catalog (CAT.NAS11-103) for part numbers of the base gasket and mounting screw.
* " $B$ " and " H " cannot be selected for the individual SUP/EXH spacer assembly or double check spacer assembly with residual pressure release valve.

## How to Order Manifold

SI unit specifications

| Symbol | Protocol | Number of outputs | Communication connector |
| :---: | :---: | :---: | :---: |
| 0 | Without SI unit |  |  |
| QA | DeviceNet ${ }^{\text {TM }}$ | 32 | M12 |
| QB |  | 16 |  |
| NA | PROFIBUS DP | 32 | M12 |
| NB |  | 16 |  |
| NC |  | 32 | D-sub Note) |
| ND |  | 16 |  |
| VA | CC-Link | 32 | M12 |
| VB |  | 16 |  |
| DA | EtherCAT | 32 | M12 |
| DB |  | 16 |  |
| FA | PROFINET | 32 | M12 |
| FB |  | 16 |  |
| EA | EtherNet/IPTM | 32 | M12 |
| EB |  | 16 |  |

Note) IP40 for the D-sub applicable communication connector specification.
For SI unit part number, refer to page 1.
DIN rail and SI unit output polarity "N" cannot be selected for the product without SI unit.
(3) SI unit output polarity

| $\mathbf{N i l}$ | Positive common |
| :---: | :---: |
| $\mathbf{N}$ | Negative common |

Note 1) Ensure a match with the common specifications of the valve to be used. Note 2) Without SI unit, the symbol is nil.
(4) Valve stations

In the case of the 32-output SI unit

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| $\mathbf{0 2}$ | 2 stations |  |
| $\vdots$ | $\vdots$ | Double wiring Note 1) |
| $\mathbf{1 6}$ | 16 stations |  |
| $\mathbf{0 2}$ | 2 stations | Specified layout Note 2) <br> $\vdots$ |
| $\vdots$ | (Available up to 32 solenoids) |  |

In the case of the 16-output SI unit

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| $\mathbf{0 2}$ | 2 stations |  |
| $\vdots$ | $\vdots$ | Double wiring Note 1) |
| $\mathbf{0 8}$ | 8 stations |  |
| $\mathbf{0 2}$ | 2 stations | Specified layout Note 2) <br> $\vdots$ |
| 16 | (Available up to 16 solenoids) |  |
| 16 | 16 stations |  |

Note 1) Double wiring: 2-position single, double, 3 -position and 4-position valves can be used on all manifold stations.
Use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
Note 2) Specified layout: Indicate the wiring specifications on the manifold specification sheet.
(Note that 2-position double, 3-position and 4-position valves cannot be used where single wiring has been specified.)
Note 3) Includes the number of blanking plate assemblies.
Note 4) For the model without the SI unit (S0), note the maximum number of solenoids of the SI unit that will be mounted. If the layout is specified, indicate it on the manifold specification sheet.

6 SUP/EXH block assembly

| Nil | Internal pilot |
| :---: | :---: |
| $\mathbf{S}$ | Internal pilot, Built-in silencer |
| $\mathbf{R}$ | External pilot |

* For built-in silencer type, P and E ports are available on $U$ and $D$ sides. $3 / 5(E)$ port is plugged. The silencer exhaust port is located on the opposite side of $\mathrm{P}, \mathrm{E}$ port entry. (Example: When the P, E port entry is D side, the silencer exhaust port is $U$ side.)
* When the built-in silencer type is used, keep the exhaust port from coming in direct contact with water or other liquids.
(7) P, E port size (One-touch fittings)

| Symbol | SY3000 | SY5000 |
| :---: | :---: | :---: |
| $\mathbf{N i l}$ | $\varnothing 8$ | $\varnothing 10$ |
| $\mathbf{N}$ | $\varnothing 5 / 16^{\prime \prime}$ | $\varnothing 3 / 8^{\mathrm{\prime} \mathrm{\prime}}$ |

* For N , sizes are in inches.

## 8 Mounting

| Nil | Direct mounting |  |
| :---: | :---: | :---: |
| D | DIN rail mounting (With DIN rail) |  |
| D0 | DIN rail mounting (Without DIN rail) |  |
| D3 | For 3 stations | Specify a longer rail than |
| $\vdots$ | $\vdots$ |  |
| D24 | For 24 stations |  |

* When it is necessary to mount a DIN rail without an SI unit, select DO and order DIN rail length separately, referring to L3 in the dimensions. Refer to the SY3000/5000 series catalog (CAT.NAS11-103) for part numbers of DIN rail.
(5) P, E port entry

| $\mathbf{U}^{\text {Note) }}$ | U side (2 to 10 stations) |
| :---: | :---: |
| D Note) | D side (2 to 10 stations) |
| B | Both sides (2 to 24 stations) |

Note) 6 For type " $S$ ", supply/exhaust block assembly with built-in silencer, choose $U$ or $D$ for $P$ port entry.

## Plug-in Connector Connecting Base Series SY3000/5000

## How to Order Manifold Assembly

| 11 Series |
| :--- |
| $\mathbf{3}$ |

* Only rubber seal type is available for the 4 -position dual 3 -port valve.

(5) Back pressure check valve
(Built-in valve type)

| Nil | None |
| :---: | :---: |
| $\mathbf{H}$ | Built-in |

* Only rubber seal type.

Manifold installed type is available if the back pressure check valve is required for a valve with metal seal. Refer to the SY3000/5000 series catalog (CAT. NAS11-103) for details. However, it is not recommended to use the built-in valve type and the manifold installed type at the same time because it will reduce the flow.

* The built-in valve type back pressure check valve is not available for the 3-position type.

Refer to the SMC website or the SY3000/5000 series catalog (CAT.NAS11-103) for details on solenoid valve specifications, Common Precautions and Specific Product Precautions.
6) Pilot valve option

| Nil | Standard (101 psi (0.7 MPa)) |
| :---: | :---: |
| $\mathbf{B}$ | Quick response type (101 psi $(0.7 \mathrm{MPa})$ ) |
| $\mathbf{K}^{*}$ | High pressure type (145psi (1.0 MPa)) |

* Only metal seal type is available for the high pressure type.

## (7) Coil type

| Nil | Standard |
| :---: | :---: |
| T | With power saving circuit (Continuous duty type) |

* Be sure to select the power saving circuit type when a valve is continuously energized for long periods of time.
* Note the specified energizing time when power saving circuit is selected.

\section*{8 Rated voltage <br> | 5 | 24 VDC |
| :--- | :--- |}

9 Light/surge voltage suppressor and common specification

| R | With surge voltage suppressor (Non-polar) |
| :---: | :---: |
| $\mathbf{U}$ | With light/surge voltage suppressor (Non-polar) |
| $\mathbf{S}$ | With surge voltage suppressor (Positive common) |
| $\mathbf{Z}$ | With light/surge voltage suppressor (Positive common) |
| NS | With surge voltage suppressor (Negative common) |
| NZ | With light/surge voltage suppressor (Negative common) |

* Only "Z" and "NZ" types are available for the product with power saving circuit. Select a valve from $R, U, S$ or $Z$ when the SI unit output polarity is Nil (Positive common).
Select a valve from R, U, NS or NZ when the SI unit output polarity is N (Negative common).

* For "K" and "H", the valve body cover has a drop prevention construction to stop the mounting screws from falling out when the valve is removed for maintenance etc.
* When ordering a valve individually, the base gasket is not included. Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance service. Refer to the SY3000/5000 series catalog (CAT.NAS11-103) for part numbers of the base gasket and mounting screw.
* "B" and "H" cannot be selected for the individual SUP/EXH spacer assembly.

Protective class class III(Mark: 〈il>)

SS5Y3-12S $\square \square$ - Stations $\int_{\mathrm{B}}^{\mathrm{D}}$ (S, R) (-D)

One-touch fitting

| DB |  | 16 | M12 |
| FA | PROFINET | 32 | M12 |
| FB |  | 16 | M12 |
| EA | EthervetIPTM | 32 | M12 |
| EB |  | 16 |  |

Note) IP40 for the D-sub applicable communication connector specification. For SI unit part number, refer to page 1. DIN rail and SI unit output polarity " N " cannot be selected for the product without SI unit.

## How to Order Manifold Assembly

- The valve arrangement is numbered as the 1 st station from the $D$ side.
- Under the manifold part number, state the valves to be mounted in order from the 1 st station as shown in the figure above.
If the arrangement becomes complicated, then indicate on the manifold specification sheet.
Note ) When mounting top ported valves, select from page 21. In this case, use caution as there is also output on the $A$ and $B$ port on base side.
Specify on a manifold specification sheet if plugs are required on the A and B port on base side.

3 SI unit output polarity

| $\mathbf{N i l}$ | Positive common |
| :---: | :---: |
| $\mathbf{N}$ | Negative common |

Note 1) Ensure a match with the common specifications of the valve to be used.
Note 2) Without SI unit, the symbol is nil.

## (4) Valve stations

In the case of the 32-output SI unit

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| $\mathbf{0 2}$ | 2 stations |  |
| $\vdots$ | $\vdots$ | Double wiring Note 1) |
| $\mathbf{1 6}$ | 16 stations |  |
| $\mathbf{0 2}$ | 2 stations | Specified layout Note 2) <br> $\vdots$ |
| $\mathbf{2 4}$ | 24 stations |  |

| In the case of the $\mathbf{1 6}$-output SI unit |
| :--- |
| Symbol Stations Note <br> $\mathbf{0 2}$ 2 stations Double wiring Note 1) <br> $\vdots$ $\vdots$  <br> $\mathbf{0 8}$ 8 stations  <br> $\mathbf{0 2}$ 2 stations Specified layout Note 2$)$ <br> $\vdots$ <br> $\mathbf{1 6}$ 16 stations  |

Note 1) Double wiring: 2-position single, double, 3-position and 4-position valves can be used on all manifold stations.
Use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
Note 2) Specified layout: Indicate the wiring specifications on the manifold specification sheet.
(Note that 2-position double, 3-position and 4-position valves cannot be used where single wiring has been specified.)
Note 3) Includes the number of blanking plate assemblies.
Note 4) For the model without the SI unit (SO), note the maximum number of solenoids of the SI unit that will be mounted. If the layout is specified, indicate it on the manifold specification sheet.

6 SUP/EXH block assembly

| Nil | Internal pilot |
| :---: | :---: |
| $\mathbf{S}$ | Internal pilot, Built-in silencer |
| $\mathbf{R}$ | External pilot |

* 3/5(E) port is plugged for the built-in silencer type.
* When the built-in silencer type is used, keep the exhaust port from coming in direct contact with water or other liquids.

Refer to the page on the right for $7,8,9$

| 10 Mounting and Option |  |  |
| :---: | :---: | :---: |
| Symbol | Mounting | Option |
| NiI | Direct mounting | None |
| AA |  | Name plate (With station number) |
| BA |  | Name plate (Without station number) |
| D $\square$ | DIN rail mounting | Without name plate |
| A $\square$ |  | Name plate (With station number) |
| B $\square$ |  | Name plate (Without station number) |

Note 1) Enter the number of stations inside $\square$.
(Refer to "DIN Rail Option" below.)
Note 2) Only direct mounting is available for Type 11 (Bottom ported).

## DIN Rail Option

| Nil | Standard length |  |
| :---: | :---: | :---: |
| $\mathbf{0}$ | Without DIN rail (with bracket) |  |
| $\mathbf{3}$ | For 3 stations | Specify a longer rail than the total length of specified <br> Spate <br> $\vdots$ |
| $\vdots$ | stations. [The SY5000 valve is now at a mountable length |  |
| $\mathbf{2 4}$ | For 24 stations | (manifold block length of 16 mm).] |

* When it is necessary to mount a DIN rail without an SI unit, select D0 and calculate DIN rail length, referring to L3 in the dimensions on page 19.
7

| Sitting type |  |
| :---: | :--- |
| Symbol | A, B port |
| C | Metric size: Straight one-touch fitting |
| L | Metric size: Elbow one-touch fitting for upward Note) |
| B | Metric size: Elbow one-touch fiting for downward Note) |
| N | Inch size: Straight one-touch fiting |
| LN | Inch size: Elbow one-touch fitting for upward Note) |
| BN | Inch size: Elbow one-touch fiting for downward Note) |
| CM $^{*}$ | Straight port, mixed sizes |
| LM $^{*}$ | Elbow port, mixed sizes (Including upward and downward piping) Note) |

Note) To avoid interference with the body or piping, select downward elbow port when mounting the optional spacer assembly.

* Indicate the sizes on the manifold specification sheet in the case of "CM", "LM".
* The direction of P, E port fittings is the same as for $A, B$ port.

If selecting "LM", indicate it on the manifold specification sheet for the $P, E$ port fitting direction.

* Elbow fittings: ø2, ø3.2 and ø1.8" are not available for the SY3000 series. ø2, $\varnothing 3.2, \varnothing 1.8 "$ and $\varnothing 5 / 32$ " are not available for the SY5000 series.

## 8 SY5000: A, B port size

| $\mathbf{Z}$ | With light/surge voltage suppressor (Positive common) |
| NS | With surge voltage suppressor (Negative common) |
| NZ | With light/surge voltage suppressor (Negative common) |

* Only "Z" and "NZ" types are available for the product with power saving circuit. Select a valve from R, U, S or Z when the SI unit output polarity is Nil (Positive common).
Select a valve from R, U, NS or NZ when the SI unit output polarity is N (Negative common).

Refer to the SY3000/5000 series catalog
(CAT.NAS11-103) for details on valve specifications.

10 Manual override

## 11 Type of mounting screw

| Nil | Round head combination screw |
| :---: | :--- |
| B | Hexagon socket head cap screw |
| K | Round head combination screw (Falling-out-prevention type) |
| H | Hexagon socket head cap screw (Falling-out-prevention type) |

* For "K" and "H", the valve body cover has a drop prevention construction to stop the mounting screws from falling out when the valve is removed for maintenance etc
* When ordering a valve individually, the base gasket is not included. Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance service.
Refer to the SY3000/5000 series catalog (CAT.NAS11-103) for part numbers of the base gasket and mounting screw.
* " B " and " H " cannot be selected for the individual SUP/EXH spacer assembly or double check spacer assembly with residual pressure release valve.

Refer to the SMC website or the SY3000/5000 series catalog (CAT.NAS11-103) for details on solenoid valve specifications, Common Precautions and Specific Product Precautions.

| FB |  | 16 |  |
| EA | EtherNet/IPTM | 32 | M12 |
| EB |  | 16 |  |

Note) IP40 for the D-sub applicable communication connector specification.
For SI unit part number, refer to page 1.
DIN rail and SI unit output polarity " N " cannot be selected for the product without SI unit.

## How to Order Manifold Assembly

[^11]

## (3) Valve stations

In the case of the 32-output SI unit

| Symbol | Stations | Note | Symbol | Stations | Note |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 02 | 2 stations | Double wiring Note 1) | 02 | 2 stations | Double wiring ${ }^{\text {Note 1) }}$ |
| ! | ! |  | ! | $\vdots$ |  |
| 16 | 16 stations |  | 08 | 8 stations |  |
| 02 | 2 stations | Specified layout Note 2) (Available up to 32 solenoids) | 02 | 2 stations | Specified layout Note 2) (Available up to 16 solenoids) |
| ! | $\vdots$ |  | ! | ! |  |
| 24 | 24 stations |  | 16 | 16 stations |  |

Note 1) Double wiring: 2-position single, double, 3-position and 4-position valves can be used on all manifold stations.
Use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
Note 2) Specified layout: Indicate the wiring specifications on the manifold specification sheet.
(Note that 2-position double, 3-position and 4-position valves cannot be used where single wiring has been specified.)
Note 3) Includes the number of blanking plate assemblies.
Note 4) For the model without the SI unit (S0), note the maximum number of solenoids of the SI unit that will be mounted. If the layout is specified, indicate it on the manifold specification sheet.
4 P, E port entry

| U Note) | U side (2 to 10 stations) |
| :---: | :---: |
| D Note) | D side (2 to 10 stations) |
| B | Both sides (2 to 24 stations) |

Note) For type " S ", supply/exhaust block assembly with built-in silencer, choose U or D for P port entry.

## (5) SUP/EXH block assembly

| Nil | Internal pilot |
| :---: | :---: |
| $\mathbf{S}$ | Internal pilot, Built-in silencer |
| $\mathbf{R}$ | External pilot |

* For built-in silencer type, $P$ and $E$ ports are available on $U$ and $D$ sides. 3/5(E) port is plugged. The silencer exhaust port is located on the opposite side of $\mathrm{P}, \mathrm{E}$ port entry. (Example: When the $P$, E port entry is $D$ side, the silencer exhaust port is $U$ side.)
* When the built-in silencer type is used, keep the exhaust port from coming in direct contact with water or other liquids.
6 P, E port size (One-touch fittings)

| Nil | $\varnothing 10$ |
| :---: | :---: |
| $\mathbf{N}$ | $\varnothing 3 / 8^{\prime \prime}$ |

* For N , sizes are in inches.

## 7 Mounting

| Nil | Direct mounting |  |
| :---: | :---: | :---: |
| D |  | DIN rail mounting (With DIN rail) |
| D0 |  | DIN rail mounting (Without DIN rail) |

* When it is necessary to mount a DIN rail without an SI unit, select D0 and order DIN rail length separately, referring to L3 in the dimensions. Refer to the SY3000/5000 series catalog (CAT.NAS11-103) for part numbers of DIN rail.

# Plug－in Connector Connecting Base Series SY3000／5000 

## How to Order Valves（With two mounting screws）

Refer to the SY3000／5000 series catalog
（CAT．NAS11－103）for details on valve specifications．

| $\mathbf{K}$ | Round head combination screw <br> （Falling－out－prevention type） |
| $\mathbf{H}$ | Hexagon socket head cap screw <br> （Falling－out－prevention type） |

＊For＂K＂and＂ H ＂，the valve body cover has a drop prevention construction to stop the mounting screws from falling out when the valve is removed for maintenance etc．
＊When ordering a valve individually，the base gasket is not included．Since the base gasket is attached to the manifold，please order the base gasket separately if it is needed for maintenance service． Refer to the SY3000／5000 series catalog （CAT．NAS11－103）for part numbers of base gasket and mounting screw．
＊＂B＂and＂H＂cannot be selected for the individual SUP／EXH spacer assembly．

## SS5Y5-M12S $\square \square$-Stations ${ }_{\mathrm{B}}^{\mathrm{O}}(-\mathrm{D})$

Note 1) These figures show the "SS5Y5-M12SQA-05D".
Note 2) Refer to page 16 for dimensions of D-sub communication connector, external pilot and built-in silencer.

| EX260 Serial transmission $\quad$ Calculation of dimensions |
| :--- |
| $\mathbf{L 1}=12.5 \times n 1+16 \times \mathrm{n} 2+88.7$ |
| $\mathbf{L 2}=12.5 \times \mathrm{n} 1+16 \times \mathrm{n} 2+48$ |
| $\mathbf{M}=\mathrm{L} 1 / 12.5+1$ Remove all numbers after the decimal. |
| $\mathbf{L 3}=12.5 \times \mathrm{M}+23$ |
| $\mathbf{L 4}=\mathrm{L} 3-10.5$ |
| $\mathbf{L 5}=(\mathrm{L} 3-\mathrm{L} 1) / 2$ |

n2: SY5000 Valve stations

## How to Order Manifold

##  IP67 <br> *Refer to Note 1) of the (2) SI unit specifications.

Series

| $\mathbf{1}$ | SV1000 |
| :--- | :--- |
| $\mathbf{2}$ | SV2000 |
| $\mathbf{3}$ | SV3000 |

| Symbol | Protocol | Number of outputs | Communication connector |
| :---: | :---: | :---: | :---: |
| 0 | Without SI unit |  |  |
| QA | DeviceNet ${ }^{\text {TM }}$ | 32 | M12 |
| QB |  | 16 |  |
| NA | PROFIBUS DP | 32 | M12 |
| NB |  | 16 |  |
| NC |  | 32 | D-sub Note 1) |
| ND |  | 16 |  |
| VA | CC-Link | 32 | M12 |
| VB |  | 16 |  |
| DA | EtherCAT | 32 | M12 |
| DB |  | 16 |  |
| FA | PROFINET | 32 | M12 |
| FB |  | 16 |  |
| EA | EtherNet/IPTM | 32 | M12 |
| EB |  | 16 |  |

- DIN rail cannot be selected for the product without SI unit.
Note 1) IP40 for the D-sub applicable communication connector specification.
(The manifold part number is "SS5V $\square$ 10S1NC/ND $\square D^{\prime \prime}$.)
Note 2) For SI unit part number, refer to page 1.

## (4) Valve stations

In the case of the 32-output SI unit

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| 02 | 2 stations | Double wiring Note 1) |
| $\vdots$ | $\vdots$ |  |
| 16 | 16 stations |  |
| 02 | 2 stations | Specified layout Note 2) (Available up to 32 solenoids) |
| $\vdots$ | : |  |
| 20 | 20 stations |  |

In the case of the 16-output SI unit

| Symbol | Stations | Note |
| :---: | :--- | :---: |
| $\mathbf{0 2}$ | 2 stations |  |
| $\vdots$ | $\vdots$ | Double wiring Note 1) |
| $\mathbf{0 8}$ | $\mathbf{8}$ stations |  |
| $\mathbf{0 2}$ | 2 stations |  |
| $\vdots$ | $\vdots$ | Specified layout Note 2) <br> Spailable up to 16 solenoids) |
| $\mathbf{1 6}$ | 16 stations |  |

Note 1) Double wiring: single, double, 3-position and 4 -position solenoid valves can be used on all manifold stations.
Use of a single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
Note 2) Specified layout: Indicate the wiring specifications on the manifold specification sheet.
(Note that double, 3-position and 4-position valves cannot be used where single solenoid wiring has been specified.)
Note 3) Includes the number of blanking plate assemblies.
(5) P, E port entry

| U | U side (2 to 10 stations) |
| :---: | :---: |
| D | D side (2 to 10 stations) |
| B | Both sides (2 to 20 stations) |

6 SUP/EXH block assembly

| Nil | Internal pilot |
| :---: | :--- |
| $\mathbf{S}^{\text {Note) }}$ | Internal pilot, Built-in silencer |
| $\mathbf{R}$ | External pilot |
| RS |  |

RS Note) External pilot, Built-in silencer
Note) When the built-in silencer type is used, keep the exhaust port from coming in direct contact with water or other liquids.

## 8 Mounting

| Nil | Direct mounting |  |
| :---: | :--- | :--- |
| $\mathbf{D}$ | DIN rail mounting (With DIN rail) |  |
| D0 | DIN rail mounting (Without DIN rail) |  |
| D3 | For 3 stations | When a longer DIN rail <br> is desired than the |
| $\vdots$ | $\vdots$ | specified stations. <br> (Specify a longer rail <br> than the standard <br> length.) |
| D20 | For 20 stations |  |

* In the case of mixed specifications (M), indicate separately on the manifold specification sheet.
* The X and PE port size of External pilot type (R, RS) are ø4 (mm) or ø5/32" (inch) for the SV1000/2000 series, and ø6 (mm) or ø1/4" (inch) for the SV3000 series.

## How to Order Manifold Assembly

Example (SV1000)

| SS5V1-W10S1NAND-04B-C6..... 1 set (Manifold part no.) <br> SV1100-5FU $\qquad$ 2 sets (Single solenoid part no.) <br> SV1200-5FU. $\qquad$ 2 sets (Double solenoid part no.) |  |
| :---: | :---: |
|  |  |
|  |  |

How to Order Valves

Series

| $\mathbf{1}$ | SV1000 |
| :---: | :---: |
| $\mathbf{2}$ | SV2000 |
| $\mathbf{3}$ | SV3000 |

## 2 Type of actuation

| 1 | 2-position single |
| :---: | :---: |
| 2 | 2-position double |
| 3 | 3-position closed center |
| 4 | 3-position exhaust center |
| 5 | 3-position pressure center |
| A | 4-position dual 3-port valve: N.C./N.C. |
| B | 4-position dual 3-port valve: N.O./N.O. |
| C | 4-position dual 3-port valve: N.C./N.O. |

* 4-position dual 3-port valves are applicable to the SV1000/2000 series only.

## (3) Pilot type

| Nil | Internal pilot |
| :---: | :---: |
| $\mathbf{R}$ | External pilot |

* External pilot specification is not available for 4-position dual 3-port valves.

## Back pressure check valve

| Nil | None |
| :---: | :---: |
| K | Built-in |

* Built-in back pressure check valve type is applicable to the SV1000 series only.
* Back pressure check valve is not available for 3 -position valve.
Note) Refer to Specific Product Precautions 2

$$
\text { in Best Pneumatics No. } 1 .
$$

(5) Rated voltage
5 24 VDC
6) Light/surge voltage suppressor

| $\mathbf{U}$ | With light/surge voltage suppressor |
| :---: | :---: |
| $\mathbf{R}$ | With surge voltage suppressor |

Refer to the SMC website or the SV series in Best Pneumatics No. 1 for details on solenoid valve specifications, Common Precautions and Specific Product Precautions.

- When P, E port outlets are indicated on the U side or D side, the P, E ports on the opposite side are plugged.
- External pilot port positions and silencer discharge port positions are the same as P, E port outlet positions.

## L: DIN Rail Overall Length

Series
1 VQC1000

## Manifold model

1

## 3 Stations

In the case of the 32-output SI unit

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| $\mathbf{0 2}$ | 2 stations |  |
| $\vdots$ | $\vdots$ | Double wiring Note 1) |
| $\mathbf{1 2}$ | 12 stations |  |
| $\mathbf{0 2}$ | 2 stations | Specified layout Note 2) <br> $\vdots$ |
| S |  |  |
| $\mathbf{2 4}$ | 24 stations | (Available up to 24 solenoids) |

In the case of the 16-output SI unit

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| $\mathbf{0 2}$ | 2 stations |  |
| $\vdots$ | $\vdots$ | Double wiring Note 1) |
| $\mathbf{0 8}$ | 8 stations |  |
| $\mathbf{0 2}$ | 2 stations | Specified layout Note 2) <br> $\vdots$ |
|  |  | (Available up to 16 solenoids) |
| 16 | 16 stations |  |

Note 1) Double wiring: single, double, 3-position and 4-position solenoid valves can be used on all manifold stations.
Use of a single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
Note 2) Specified layout: Indicate the wiring specifications on the manifold specification sheet.
(Note that 2-position double, 3-position and
4 -position valves cannot be used where single wiring has been specified.)
Note 3) Includes the number of blanking plate assemblies.
4) Cylinder port size

| C3 | With ø3.2 One-touch fitting |
| :---: | :---: |
| C4 | With ø4 One-touch fitting |
| C6 | With ø6 One-touch fitting |
| M5 | M5 thread |
| CM | Mixed sizes and with port plug |
| L3 | Top ported elbow <br> with ø3.2 One-touch fitting |
| L4 | Top ported elbow <br> with ø4 One-touch fitting |
| L6 | Top ported elbow <br> with ø6 One-touch fitting |
| L5 | M5 thread |
| B3 | Bottom ported elbow <br> with ø3.2 One-touch fitting |
| B4 | Bottom ported elbow <br> with $\varnothing 4$ One-touch fitting |
| B6 | Bottom ported elbow <br> with $\varnothing 6 ~ O n e-t o u c h ~ f i t t i n g ~$ |
| B5 thread |  |

Note 1) Indicate the sizes on the manifold specification sheet in the case of "CM", "LM".
Note 2) When selecting the mixed size for different types of piping or dual flow fitting assembly, enter "MM" and give instructions in the manifold specification sheet.
Note 3) Symbols for inch sizes are as follows:

- N1: ø1/8"
-N3: ø5/32"
- N7: $1 / 4^{\prime \prime}$
- NM: Mixed

The top ported elbow is LN $\square$ and the bottom ported elbow is $\mathrm{BN} \square$.
6) SI unit output polarity

| $\mathbf{N i l}$ | Positive common |
| :---: | :---: |
| $\mathbf{N}$ | Negative common |

7 Option

| Nil | None |
| :---: | :--- |
| B | With back pressure check valve (All stations) Note 2) |
| D | With DIN rail (Rail length: Standard) |
| D $\square$ | With DIN rail (Rail length: Special) Note 3) |
| K | Special wiring spec. (Except double wiring) Note 4) |
| N | With name plate |
| R | External pilot Note 5) |
| S | Built-in silencer, Direct exhaust Note 6) |

Note 1) When two or more symbols are specified, indicate them alphabetically. Example: -BRS
Note 2) When the back pressure check valve is desired, and is to be installed only in certain manifold stations, specify the mounting position on the manifold specification sheet.
Note 3) For special DIN rail length, indicate "D $\square$ ". (Enter the number of stations inside $\square$.) Example: -D08
In this case, stations will be mounted on a DIN rail for 8 stations regardless of the actual number of manifold stations.
The specified number of stations must be larger than the number of stations on the manifold. Indicate "-DO" for the option without DIN rail.
Note 4) Specify wiring type of each station on the manifold specification sheet.
Note 5) For external pilot option, "-R", indicate the external pilot specification " $R$ " for the applicable valves as well.
Note 6) Built-in silencer type does not satisfy IP67.
Note 7) When the "SD0" (Without SI unit) is specified, "-D", "-D $\square$ " cannot be selected.

## Kit type

| Kit <br> (Serial transmission kit (for Output)) | Symbol | Protocol | Number of outputs | Communication connector |
| :---: | :---: | :---: | :---: | :---: |
|  | SD0 | Without SI unit |  |  |
|  | SQA | DeviceNet ${ }^{\text {TM }}$ | 32 | M12 |
| Sl unit | SQB |  | 16 |  |
| - | SNA | PROFIBUS DP | 32 | M12 |
| $\bigcirc$ | SNB |  | 16 |  |
| - | SNC |  | 32 | D-sub Note 1) |

| B6 | Bottom ported elbow <br> with ø6 One-touch fitting |
| B8 | Bottom ported elbow <br> with ø8 One-touch fitting |
| LM | Elbow port, mixed sizes |
| MM Note 2) | Mixed size for different types of piping, |
| option installed |  |

Note 1) Indicate the sizes on the manifold specification sheet in the case of "CM", "LM".
Note 2) When selecting the mixed size for different types of piping or dual flow fitting assembly, enter "MM" and give instructions in the manifold specification sheet.
Note 3) Symbols for inch sizes are as follows:

- N3: ø5/32"
-N7: ø1/4"
- N9: ø5/16"
- NM: Mixed

The top ported elbow is LN $\square$ and the bottom ported elbow is $\mathrm{BN} \square$.
(6) SI unit output polarity

| $\mathbf{N i l}$ | Positive common |
| :---: | :---: |
| $\mathbf{N}$ | Negative common |

7 Option

| Nil | None |
| :---: | :--- |
| B | With back pressure check valve (All stations) Note 2) |
| D | With DIN rail (Rail length: Standard) |
| D | With DIN rail (Rail length: Special) Note 3) |
| $\mathbf{K}$ | Special wiring spec. (Except double wiring) Note 4) |
| $\mathbf{N}$ | With name plate |
| $\mathbf{R}$ | External pilot Note 5) |
| $\mathbf{S}$ | Built-in silencer, Direct exhaust Note 6) |
| $\mathbf{T}$ | P and R ports included on both sides of the U side Note 7) |

Note 1) When two or more symbols are specified, indicate them alphabetically. Example: -BRS
Note 2) When the back pressure check valve is desired, and is to be installed only in certain manifold stations, specify the mounting position on the manifold specification sheet.
Note 3) For special DIN rail length, indicate "D $\square$ ". (Enter the number of stations inside $\square$.) Example: -D08
In this case, stations will be mounted on a DIN rail for 8 stations regardless of the actual number of manifold stations.
The specified number of stations must be larger than the number of stations on the manifold. Indicate "-DO" for the option without DIN rail.
Note 4) Specify wiring type of each station on the manifold specification sheet.
Note 5) For external pilot option, "-R", indicate the external pilot specification "R" for the applicable valves as well.
Note 6) Built-in silencer type does not satisfy IP67.
Note 7) 2 ports for SUP and EXH are included on both sides of $U$ side (cylinder port and coil side) with $\varnothing 12$ One-touch fittings.
Note 8) When the "SD0" (Without SI unit) is specified, "-D", "-D $\square$ " cannot be selected.

## (5) Kit type

8 Kit | Kit |
| :--- |
| (Serial transmission kit (for Output)) |

| Symbol | Protocol | Number of outputs | Communication connector |
| :---: | :---: | :---: | :---: |
| SD0 | Without SI unit |  |  |
| SQA | DeviceNet ${ }^{\text {TM }}$ | 32 | M12 |
| SQB |  | 16 |  |

## Plug－in Manifold Stacking Base S Kit（Serial Transmission）： For EX260 Integrated－type（For Output） Serial Transmission System Series S0700

## How to Order Manifold

## 

1 Stations
In the case of the 32－output SI unit

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| $\mathbf{0 1}$ | 1 station |  |
| $\vdots$ | $\vdots$ | Double wiring Note 1） |
| $\mathbf{1 6}$ | 16 stations |  |
| $\mathbf{0 1}$ | 1 station | Specified layout Note 2） <br> $\vdots$ |
| $\mathbf{2 4}$ | 24 stations |  |

| Symbol | Stations | Note |
| :---: | :---: | :---: |
| 01 | 1 station | Double wiring Note 1） |
| $\vdots$ | $\vdots$ |  |
| 08 | 8 stations |  |
| 01 | 1 station | Specified layout Note 2） （Available up to 16 solenoids） |
| 引 | 引 |  |
| 16 | 16 stations |  |

Note 1）Double wiring：single，double，3－position and 4－position solenoid valves can be used on all manifold stations Use of a single solenoid will result in an unused control signal．If this is not desired， order with a specified layout．
Note 2）Specified layout：Indicate the wiring specifications on the manifold specification sheet．
（Note that 2－position double，3－position and 4－position valves cannot be used where single wiring has been specified．）
Note 3）Includes the number of blanking plate assemblies．
（2）Cylinder port size

| Symbol | Port size |  |
| :---: | :---: | :---: |
| C2 | With $\varnothing 2$ One－touch fitting |  |
| C3 | With $\varnothing 3.2$ One－touch fitting | Metric |
| C4 | With $\varnothing 4$ One－touch fitting |  |
| CM | Mixed sizes and with port plug Note） |  |
| N1 | With $\varnothing 1 / 8$＂One－touch fitting | Inch |
| N3 | With $\varnothing 5 / 32$＂One－touch fitting |  |
| NM | Mixed sizes and with port plug Note） |  |

Note）Indicate the sizes on the manifold specification sheet in the case of＂CM＂，＂NM＂．
3 P，R port size

| Symbol | Port size |  |
| :---: | :---: | :---: |
| Nil | With $\varnothing 8$ One－touch fitting Note） |  |
| C6 | With $\varnothing 6$ One－touch fitting |  |
| C8 | Witric |  |
| N7 | With One－touch fitting |  |
| N9 | Wit4＂One－touch fitting | Inch |

Note）The cylinder port is $\varnothing 5 / 16^{\prime \prime}$ when measured in inches．

| （4）Kit type |  |  |  |
| :---: | :---: | :---: | :---: |
| Symbol | Protocol | Number of outputs | Communication connector |
| SD0 | Without SI unit |  |  |
| SQA | DeviceNet ${ }^{\text {TM }}$ | 32 | M12 |
| SQB |  | 16 |  |
| SNA | PROFIBUS DP | 32 | M12 |
| SNB |  | 16 |  |
| SNC |  | 32 | D－sub Note 1） |
| SND |  | 16 |  |
| SVA | CC－Link | 32 | M12 |
| SVB |  | 16 |  |
| SDA | EtherCAT | 32 | M12 |
| SDB |  | 16 |  |
| SFA | PROFINET | 32 | M12 |
| SFB |  | 16 |  |
| SEA | EtherNet／IPTM | 32 | M12 |
| SEB |  | 16 |  |

Note 1）The maximum number of stations is determined by the total number of solenoids．
For mixed single and double wirings， enter＂－K＂to the order code options．
Note 2）For SI unit part number，refer to page 1.

| Type of actuation | Single | Double， <br> Dual 3－port |
| :---: | :---: | :---: |
| Number of solenoids | 1 | 2 |

（5）SI unit output polarity

| $\mathbf{N i l}$ | Positive common |
| :---: | :---: |
| $\mathbf{N}$ | Negative common |

6 Option

| Symbol | Option |
| :---: | :--- |
| Nil | None |
| B Note 2） | With back pressure check valve（All stations） |
| $\mathbf{D}$ | With DIN rail（Rail length：Standard） |
| D0 | Without DIN rail（With bracket） |
| D $\square$ Note 3） | With DIN rail（Rail length specified，$\square:$ Stations） |
| K Note 4） | Special wiring specifications <br> （Except double wiring） |
| $\mathbf{N}$ | With name plate |
| R Note 5） | External pilot |
| S | Built－in silencer |

Note 1）When two or more options are specified，indicate them alphabetically． Example）－BKN
Note 2）When the back pressure check valve is desired， and is to be installed only in certain manifold stations，specify the mounting position on the manifold specification sheet．
Note 3）The available number of stations is larger than the number of manifold stations．
Note 4）Indicate the wiring specifications for mixed single and double wirings
Note 5）Refer to the S0700 series catalog （CAT．NAS11－88）for details．
＊Refer to the S0700 series catalog（CAT．NAS11－88） for manifold optional parts．
＊Refer to the S0700 series catalog（CAT．NAS11－88）
for manifold exploded view．
＊When the＂SDO＂（Without SI unit）is specified，＂－D＂， ＂－D $\square$＂cannot be selected．

## How to Order Manifold Assembly

## Example (Serial transmission kit)

## SS0750-04C4SNAN ... 1 set - Manifold base part no. <br> *S0720-5...................... 4 sets - Valve part no. (Stations 1 to 4)

$\longrightarrow *$ Prefix the asterisk to the part nos. of the solenoid valve, etc. Write sequentially from the 1 st station on the $D$ side. When part nos. written collectively are complicated, specified on the manifold specification sheet.

- Specify the part numbers for valves and options together beneath the manifold base part number.

How to Order Valves

Refer to the SMC website or the S0700 series catalog (CAT.NAS11-88) for details on solenoid valve specifications, Common Precautions and Specific Product Precautions.

Plug-in Manifold Stacking Base S Kit (Serial Transmission): For EX260 Integrated-type (For Output) Serial Transmission System

Series S0700

Dimensions

## SS0750

S Kit (Serial transmission kit: EX260)

| Dimensions |  |  |  |  |  |  |  | Formula $\mathrm{L} 1=8.5 \mathrm{n}+31, \mathrm{~L} 2=8.5 \mathrm{n}+74$ |  |  |  |  | n : Station (Maximun 16 stations) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{L} \mathrm{n}^{\text {n }}$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 |
| L1 | 39.5 | 48 | 56.5 | 65 | 73.5 | 82 | 90.5 | 99 | 107.5 | 116 | 124.5 | 133 | 141.5 | 150 | 158.5 | 167 |
| L2 | 82.5 | 91 | 99.5 | 108 | 116.5 | 125 | 133.5 | 142 | 150.5 | 159 | 167.5 | 176 | 184.5 | 193 | 201.5 | 210 |
| L3 | 112.5 | 112.5 | 125 | 137.5 | 137.5 | 150 | 162.5 | 162.5 | 175 | 187.5 | 187.5 | 200 | 212.5 | 212.5 | 225 | 237.5 |
| L4 | 123 | 123 | 135.5 | 148 | 148 | 160.5 | 173 | 173 | 185.5 | 198 | 198 | 210.5 | 223 | 223 | 235.5 | 248 |

# Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" for 3/4/5 Port Solenoid Valve Precautions. The Operation Manual can be downloaded from the SMC website, http://www.smcworld.com 

## Design/Selection

## $\triangle$ Warning

1. Use this product within the specification range.

Using beyond the specified specifications range can cause
fire, malfunction, or damage to the system.
Check the specifications before operation.
2. When using for an interlock circuit:

- Provide a multiple interlock system which is operated by another system (such as mechanical protection function).
- Perform an inspection to confirm that it is working properly.
This may cause possible injury due to malfunction.

## $\triangle$ Caution

1. When applicable to UL, use a Class 2 power supply unit conforming to UL1310 for direct current power supply.
2. Use this product within the specified voltage range.

Using beyond the specified voltage range is likely to cause the units and connecting devices to be damaged or to malfunction.
3. Do not install a unit in a place where it can be used as a foothold.
Applying any excessive load such as stepping on the unit by mistake or placing a foot on it, will cause it to break.
4. Keep the surrounding space free for maintenance.

When designing a system, take into consideration the amount of free space needed for performing maintenance.
5. Do not remove the name plate.

Improper maintenance or incorrect use of operation manual can cause failure and malfunction. Also, there is a risk of losing conformity with safety standards.

## Mounting

## $\triangle$ Caution

1. When handling and assembling units:

- Do not apply excessive force to the unit when disassembling.
The connecting portions of the unit are firmly joined with seals.
- When joining units, take care not to get fingers caught between units.
Injury can result.

2. Do not drop, bump, or apply excessive impact.

Otherwise, the unit can become damaged, malfunction, or fail to function.
3. Observe the tightening torque range.

Tightening outside of the allowable torque range will likely damage the screw.
IP67 cannot be guaranteed if the screws are not tightened to the specified torque.

## $\triangle$ Caution

4. When lifting a large size manifold solenoid valve unit, take care to avoid causing stress to the valve connection joint.
The connection parts of the unit may be damaged. Because the unit may be heavy, carrying and installation should be performed by more than one operator to avoid strain or injury.

## 5. When placing a manifold, mount it on a flat surface.

Torsion in the whole manifold can lead to trouble such as air leakage or defective insulation.

## Wiring

## $\triangle$ Caution

1. Check the grounding to maintain the safety of the reduced wiring system and for anti-noise performance.
Provide a specific grounding as close to the unit as possible to minimize the distance to grounding.
2. Avoid repeatedly bending or stretching the cable and applying a heavy object or force to it.
Wiring applying repeated bending and tensile stress to the cable can break the circuit.
3. Avoid miswiring.

If miswired, there is a danger of malfunction or damage to the reduced wiring system.
4. Do not wire while energizing the product.

There is a danger of malfunction or damage to the reduced wiring system or output device.
5. Avoid wiring the power line and high pressure line in parallel.
Noise or surge produced by signal line resulting from the power line or high pressure line could cause malfunction. Wiring of the reduced wiring system or output device and the power line or high pressure line should be separated from each other.
6. Check the wiring insulation.

Defective insulation (contact with other circuits, improper insulation between terminals, etc.) may cause damage to the reduced wiring system or output device due to excessive voltage and current.
7. When a reduced wiring system is installed in machinery/equipment, provide adequate protection against noise by using noise filters, etc.
Noise in signal lines may cause malfunction.

Series EX260 Specific Product Precautions 2

Be sure to read before handling．Refer to back cover for Safety Instructions，<br>＂Handling Precautions for SMC Products＂（M－E03－3）and＂Operation Manual＂for 3／4／5 Port Solenoid Valve Precautions． The Operation Manual can be downloaded from the SMC website，http：／／www．smcworld．com

## Wiring

## © Caution

8．When connecting wires of output device，prevent water， solvent or oil from entering inside the connector section． This can cause damage，equipment failure or malfunction．

9．Avoid wiring patterns in which excessive stress is applied to the connector．
This may cause malfunction or damage to the unit due to contact failure．
10．Select connectors that are $\varnothing 16$ or less if mounting manifolds directly using fieldwireable connectors for SI unit power supply wiring．
Using large diameter connectors causes interference with the mounting surface．
The following cables with connectors are recommended．
$\square$ For EX260－SPR $\square /$－SDN $\square /$－SEC $\square /$－SPN $\square /$－SEN $\square$
＜Cable with connector＞
－EX500－AP $\square \square \square-\square$
－PCA－1401804／－1401805／－1401806
$\square$ For EX260－SMJ $\square$
＜Cable with connector＞
－EX9－ACロロロ－1
－PCA－1401807／－1401808／－1401809

## Operating Environment

## $\triangle$ Warning

1．Do not use in an atmosphere containing an inflammable gas or explosive gas．
Use in such an atmosphere is likely to cause a fire or explosion．This system is not explosion－proof．

## © Caution

1．Select the proper type of enclosure according to the environment of operation．
IP67 is achieved when the following conditions are met．
1）Provide appropriate wiring between all units using electrical wiring cables，communication connectors and cables with M12 connectors．
2）Suitable mounting of each unit and manifold valve．
3）Be sure to mount a seal cap on any unused connectors．
If using in an environment that is exposed to water splashes，please take measures such as using a cover．
When the enclosure is IP40，do not use in an operating environment or atmosphere where it may come in contact with corrosive gas， chemical agents，seawater，water，or water vapor．
When connected to the EX260－SPR5／6／7／8，manifold enclosure is IP40．

## Operating Environment

## 1 Caution

2．Provide adequate protection when operating in locations such as the following．
Failure to do so may cause damage or malfunction．
The effect of countermeasures should be checked in individual equipment and machine．
1）Where noise is generated by static electricity，etc．
2）Where there is a strong electric field
3）Where there is a danger of exposure to radiation
4）When in close proximity to power lines or high voltage lines
3．Do not use in an environment where oil and chemicals are used．
Operating in environments with coolants，cleaning solvents，various oils or chemicals may cause adverse effects（damage，malfunction） to the unit even in a short period of time．
4．Do not use in an environment where the product could be exposed to corrosive gas or liquid．
This may damage the unit and cause it to malfunction．
5．Do not use in locations with sources of surge generation．
Installation of the unit in an area around the equipment （electromagnetic lifters，high frequency induction furnaces，welding machine，motors，etc．），which generates the large surge voltage could cause to deteriorate an internal circuitry element of the unit or result in damage．Implement countermeasures against the surge from the generating source，and avoid touching the lines with each other．

6．The product is CE marked，but not immune to lightning strikes．Take measures against lightning strikes in your system．

7．Keep dust，wire scraps and other extraneous material from getting inside the product．
This may cause malfunction or damage．
8．Mount the unit in such locations，where no vibration or shock is affected．

This may cause malfunction or damage．
9．Do not use in places where there are cyclic temperature changes．
In case that the cyclic temperature is beyond normal temperature changes，the internal unit is likely to be adversely effec－ted．
10．Do not use in direct sunlight．
Do not use in direct sunlight．It may cause malfunction or damage．
11．Use this product within the specified ambient temperature range．
This may cause malfunction．
12．Do not use in places where there is radiated heat around it．
Such a place is likely to cause malfunction．

Series EX260
Specific Product Precautions 3
Be sure to read before handling. Refer to back cover for Safety Instructions,
"Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" for 3/4/5 Port Solenoid Valve Precautions.
The Operation Manual can be downloaded from the SMC website, http://www.smcworld.com

## Adjustment/Operation

## $\triangle$ Warning

1. Do not perform operation or setting with wet hands.

There is a risk of electrical shock.

## $\triangle$ Caution

1. Use a watchmakers'screwdriver with thin blade for the setting of each switch of the SI unit.
When setting the switch, do not touch other unrelated parts.
This may cause parts damage or malfunction due to a short circuit.
2. Provide adequate setting for the operating conditions.

Failure to do so could result in malfunction.
Refer to the operation manual for setting of the switches
3. For details on programming and address setting, refer to the manual from the PLC manufacturer.
The content of programming related to protocol is designed by the manufacturer of the PLC used.
4. For the EX260-SPN $\square$, the side of the SI unit may become hot.

It may cause burns.

## Maintenance

## $\triangle$ Warning

1. Do not disassemble, modify (including circuit board replacement) or repair this product.
Such actions are likely to cause injuries or breakage.
2. When an inspection is performed,

- Turn off the power supply.
- Stop the air supply, exhaust the residual pressurein piping and verify that the air is released before performing maintenance work.
Unexpected malfunction of system components and injury can result.

## $\triangle$ Caution

1. When handling and replacing the unit:

- Do not apply excessive force to the unit when disassembling.
The connecting portions of the unit are firmly joined with seals.
- When joining units, take care not to get fingers caught between units.
Injury can result.

2. Perform periodic inspection.

Unexpected malfunction in the system composition devices is likely to occur due to malfunction of machinery or equipment.
3. After maintenance, make sure to perform an appropriate functionality inspection.

In cases of abnormality such as faulty operation, stop operation. Unexpected malfunction in the system composition devices is likely to occur.
4. Do not use benzene and thinner for cleaning units.

Damage to the surface or erasure of the display can result.
Wipe off any stains with a soft cloth.
If the stain is persistent, wipe off with a cloth soaked in a dilute solution of neutral detergent and wrung out tightly, and then finish with a dry cloth.

## Other

## $\triangle$ Caution

1. Refer to the catalog of each series for Common Precautions and Specific Product Precautions on manifold solenoid valves.

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

Danger: Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

## © Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.
2. Only personnel with appropriate training should operate machinery and equipment.
The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.
3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
4. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
5. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
6. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
7. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
8. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
9. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
10. An application which could have negative effects on people, property, or animals requiring special safety analysis.
11. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.
*1) ISO 4414: Pneumatic fluid power - General rules relating to systems.
ISO 4413: Hydraulic fluid power - General rules relating to systems.
IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots - Safety. etc.

## $\triangle$ Caution

1. The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

## Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

## Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
*2) Vacuum pads are excluded from this 1 year warranty.
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

## Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

# Base Mounted <br> Plug-in Unit <br> Series VQC4000 $\subset$ 

How to Order Manifold

The minimum or maximum number of stations differs depending on the electrical entry. (Refer to (3))
Note) In the case of compatibility with the S kit/AS-
Interface, the maximum number of solenoids is as shown below, so please be careful of the number of stations.
8 in/8 out: Maximum 8 solenoids
4 in/4 out: Maximum 4 solenoids
(2) Cylinder port size

## C8 With ø8 One-touch fitting

C10 With ø10 One-touch fitting
C12 With ø12 One-touch fitting
02 Rc 1/4 Note)
03 Rc 3/8 Note)
Bottom ported Rc 1/4 Note)
CM Mixed
Note) Besides Rc, also compatible with G, NPT/NPTF. Part number displayed is as shown below.

| SI unit COM | EX250 integrated type (for I/O) serial transmission system |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | DeviceNet | PROFIBUS DP | CC-Link | AS-Interface | CANopen | ControlNet | EtherNet/IP |  |
| Nil | + COM | - | - | $O$ | - | - | - | - |
| $\mathbf{N}$ | - COM | $\bigcirc$ | $O$ | - | $O$ | $O$ | $O$ | p |

| SI unit COM | EX500 gateway type serial transmission system |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | DeviceNet | PROFIBUS DP | CC-Link | EtherNet/IP |  |
| Nil | + COM | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| $\mathbf{N}$ | - COM | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

Note) Leave the box blank for the SI unit COM without SI unit (SDO $\square$ ).

| Number of input blocks |
| :--- |
| (Enter only for S kit compliant with EX240 and EX250) |

| Symbol | No. of blocks | EX240 | EX250 |
| :---: | :---: | :---: | :---: |
| Nil | Without SI unit | $\bigcirc$ | $\bigcirc$ |
| $\mathbf{0}$ | Without input block | $\bigcirc$ | $\bigcirc$ |
| $\mathbf{1}$ | With 1 input block | $\bigcirc$ | $\bigcirc$ |
| $\vdots$ | $\vdots$ | $\bigcirc$ | $\bigcirc$ |
| $\vdots$ | $\vdots$ | - | $\bigcirc$ |
| $\mathbf{4}$ | With 4 input blocks | $\bigcirc$ | $\bigcirc$ |
| $\vdots$ | $\vdots$ | - | $\bigcirc$ |
| $\vdots$ | $\vdots$ |  |  |
| $\mathbf{8}$ | With 8 input blocks | - |  |

6 Input block type (Fill out for I/O unit only)

| Nil | Without input block |
| :---: | :--- |
| $\mathbf{0}$ | M12, 8 inputs (EX240) |
| $\mathbf{1}$ | $\mathrm{M} 12,2$ inputs (EX250) |
| $\mathbf{2}$ | $\mathrm{M} 12,4$ inputs (EX250) |
| $\mathbf{3}$ | $\mathrm{M} 8,4$ inputs (EX250) |

Input block COM
(Enter only for S kit compliant with EX240 and EX250)

| $\mathbf{N i l}$ | PNP sensor input (+ COM) or without input block |
| :---: | :--- |
| $\mathbf{N}$ | NPN sensor input (-COM) |

Dside Stations $\cdots \cdots 2 \cdots 3 \cdots 4 \cdots 5 \cdots 67 \cdots 8 \cdot \cdots n$ side

* Stations are counted from station 1 on the $D$ side

* The maximum number of stations displayed in parentheses is applied to the special wiring specification (Option "-K").

Note 1) When selecting SI units with SDTC or SDTD specifications, there are limits to the supply current from the SI unit to the input block or valve. Refer to page 1667 for details. Note 2) When selecting SI units with SDZCN specifications only, IP40 is compatible. (All other SI units are IP67 compliant.)

## EX500 SI Unit Part No. Table

| Symbol | Protocol type | Serial unit No. |  | Page |
| :---: | :---: | :---: | :---: | :---: |
|  |  | NPN output (+COM) | PNP output (-COM) |  |
| SDA2 | Serial kit for DeviceNet | EX500-Q001 | EX500-Q101 | P. 1688 |
|  | Serial kit for PROFIBUS-DP |  |  |  |
|  | Serial kit for CC-LINK |  |  |  |
|  | EtherNet/IP |  |  |  |

EX240 SI Unit Part No. Table

| Symbol | Protocol type | Serial unit No. | Page |
| :---: | :---: | :---: | :---: |
| SDQW | For DeviceNet | EX240-SDN2 | 1661 |
| SDNW | For PROFIBUS DP | EX240-SPR1 |  |

EX250 SI Unit Part No. Table

| Symbol | Protocol type | Serial unit no. | Page |
| :---: | :---: | :---: | :---: |
| SDQ | Serial kit for DeviceNet | EX250-SDN1 | P. 1664 |
| SDN | Serial kit for PROFIBUS-DP | EX250-SPR1 |  |
| SDV | Serial kit for CC-LINK | EX250-SMJ2 |  |
| SDTA | AS-i, 8 in/out, 31 slave modes, 2 power supply systems | EX250-SAS3 |  |
| SDTB | AS-i, 4 in/out, 31 slave modes, 2 power supply systems | EX250-SAS5 |  |
| SDTC | AS-i, 8 in/out, 31 slave modes, 1 power supply systems | EX250-SAS7 |  |
| SDTD | AS-i, 4 in/out, 31 slave modes, 1 power supply systems | EX250-SAS9 |  |
| SDY | CANopen | EX250-SCA1A |  |
| SDZCN | ControlNet | EX250-SCN1 |  |
| SDZEN | EtherNet/IP | EX250-SEN1 |  |

Refer to pages 1680 to 1694 for the details of EX500 gateway type serial transmission systems, pages 1664 to 1679 for the details of EX250 integratedtype (for I/O) serial transmission systems and pages 1661 to 1663 for the details of EX240 integrated-type (for I/O) serial transmission systems.

Note 1) Values represented in this column are in the following conditions:
VQC1000: Cylinder port size C6 without a back pressure check valve
VQC2000: Cylinder port size C8 without a back pressure check valve
VQC4000: Cylinder port size Rc 3/8
Note 2) Values represented in this column are based on JIS B 8375-1981 (operating with clean air and a supply pressure of 0.5 MPa . Equipped with light/surge voltage suppressor. Values vary depending on the pressure as well as the air quality.) Values for double types are when the switch is ON.

- Using our D-sub connector for electrical connections greatly reduces labor, while it also minimizes wiring and saves space.
- We use a D-sub connector (25P) that conforms to MIL standards and is therefore widely compatible with many standard commercial models.
- Top or side entry for the connector can be changed freely, allowing for changes even after mounting, to meet any changing needs for space.

## T VQC1000/2000/4000 Kit (Terminal block box kit) [P67 compliant

## Terminal Block Connection

Step 1. How to remove terminal block cover Loosen the 4 mounting screws (M4) and remove the terminal block cover.

Step 2. The diagram below shows the terminal block wiring.
All stations are provided with double wiring regardless of the valves which are mounted.
Connect each wire to the power supply side, according to the markings provided inside the terminal block.

Step 3. How to replace the terminal block cover
Securely tighten the screws to the torque shown in the table below, after confirming that the gasket is installed correctly.

- Applicable crimped terminal: 1.25-3S,1.25Y-3,1.25Y-3N,1.25Y-3.5
- Name plate: VVQ5000-N-T
- Drip proof plug assembly (for G 3/4): AXT100-B06A

## Electrical Wiring Specifications (Conforms to IP67)

## Special Wiring Specifications (Option)

Mixed single and double wiring are available as options. The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. The total number of solenoids (points) must not exceed 20.

## 1. How to order

Indicate option symbol "-K" in the manifold part number and be sure to specify station positions for single or double wiring on the manifold specification sheet.

## 2. Wiring specifications

Connector terminal numbers are connected from solenoid station 1 on the A side in the order indicated by the arrows without skipping any terminal numbers.

## Replacement parts

Pilot valve assembly

| VQC1000 | VQ111 ${ }^{(4)}$ W-D-1 | Single type |
| :---: | :---: | :---: |
| VQC2000 | VQ131 ${ }_{(1)}^{(1)} \mathrm{W}-\mathrm{\square}-1$ | Double type |
| VQC4000 | VQZ111P(Y)- $\square^{\text {N }}$ |  |

Note 1) (H): $1.5 \mathrm{~W},(\mathrm{Y}): 0.5 \mathrm{~W}$
Note 2) $\square$ : Coil rated voltage Ex.) 24 VDC: 5
Note 3) This model no. does not include an indicator light subplate. If it is required, please order it separately.
(17) Tie-rod assembly part no. (2 units)

| VQC1000 | VVQC1000-TR- $\square$ |
| :--- | :---: |
| VQC2000 | VVQC2000-TR- $\square$ |
| VQC4000 | VVQC4000-TR- $\square$ |

Note 1) Please order when reducing the number of manifold stations. When increasing the number of stations, additional orders are not required since they are included in the manifold block assembly.
Note 2) $\square$ : Number of stations, 02 to 24 (VQC4000: 02 to 16)

# Series VQC Specific Product Precautions 1 

Be sure to read this before handling. Refer to Front matters 58 and 59 for Safety Instructions and pages 3 to 7 for 3/4/5 Port Solenoid Valve Precautions.

## Manual Override

## Warning

Since connected equipment will operate when the manual override is activated, confirm that conditions are safe prior to activation.
The non-locking push type (tool required) is standard, and the slotted locking type (tool required) is optional.

## VQC1000/2000

Non-locking push type (Tool required)

VQC1000

Push down the manual override button with a small screwdriver, etc., until it stops.
The manual override will return when released.

Slotted locking type (Tool required) <Option>

Push down the manual override button with a small flat head screwdriver until it stops, and turn it clockwise $90^{\circ}$ to lock it. Turn it counterclockwise to release it.

Locking type (Manual) <Option>

Push down the manual override button with a small flat head screwdriver or with your finger until it stops, and turn it clockwise $90^{\circ}$ to lock it. Turn it counterclockwise to release it.

## Slide locking type (Manual) <Option>

Slide the manual override button with a small flat head screwdriver or with your finger until it stops at the pilot valve side (ON side) to lock it. Slide it to the fitting side (OFF side) to release it. It can also be used as a push type using a screwdriver, etc., of $\varnothing 1.7$ or less.

## IVQC4000

Push type (Tool required)

Locking type (Tool required) <Optional>

Push down the manual override button with a small screwdriver until it stops.
The manual override will return when released.

Push down the manual override button with a small flat head screwdriver until it stops, and turn it clockwise $90^{\circ}$ to lock it. Turn it counterclockwise to release it.

## Solenoid Valve Removal and Mounting (VQC1000/2000)

## $\triangle$ Caution

# Series VQC Specific Product Precautions 2 

Be sure to read this before handling. Refer to Front matters 58 and 59 for Safety Instructions and pages 3 to 7 for 3/4/5 Port Solenoid Valve Precautions.

## Replacing One-touch Fittings <br> $\triangle$ Caution

Cylinder port fittings are available in cassette type and can be replaced easily.
Fittings are secured with a retaining clip that is inserted from the top side of the valve. After removing the valve, remove the clip with a flat head screw driver to replace the fittings.
To mount a fitting, insert the fitting assembly until it stops and reinsert the retaining clip to its designated position.
IVQC1000/2000

| Applicable tube O.D. | Fitting assembly part no. |  |

■VQC4000

## Light/Surge Voltage Suppressor (VQC1000/2000) <br> $\triangle$ Caution

Indicator lights are all positioned on one side for both single solenoid and double solenoid type valves.
For double solenoid type, 2 colours that are same as the manual override are used to indicate the energization of Aside or B-side.

(For VQC1000)
DC circuit

Note 1) A-side energized: Light (orange) ON With miswiring prevention mechanism (stop diode) B-side energized: Light (green) ON With surge absorbing mechanism (surge absorbing diode) mechanism
Note 2) Coil surge voltage generated when OFF is about -40 V . Please contact SMC separately for further suppression of the coil surge voltage.

Internal Wiring Specifications (VQC4000)

## $\triangle$ Caution

Light circuit assembly DC: Single
(orange)

Note) Coil surge voltage generated when OFF is about -60V. Please contact SMC separately for further suppression of the coil surge voltage.

## How to Calculate the Flow Rate

Refer to Front matters 44 to 47.

Be sure to read this before handling. Refer to Front matters 58 and 59 for Safety Instructions and pages 3 to 7 for 3/4/5 Port Solenoid Valve Precautions.

## Serial Wiring EX500/EX250/EX240/EX126 Precautions

## © Warning

1. These products are intended for use in general factory automation equipment.
Avoid using these products in machinery/equipment which affects human safety, and in cases where malfunction or failure can result in extensive damage.
2. Do not use in explosive environments, in the presence of inflammable gases, or in corrosive environments. This can cause injury or fire.
3. Work such as transporting, installing, piping, wiring, operation, control and maintenance should be performed by knowledgable and qualified personnel only. As handling involves the risk of a danger of electrocution, injury or fire.
4. Install an external emergency stop circuit that can promptly stop operation and shut off the power supply.
5. Do not modify these products. Modifications done to these products carry the risk of injury and damage.

## © Caution

1. Read the instruction manual carefully, strictly observe the precautions and operate within the range of the specifications.
2. Do not drop these products or submit them to strong impacts. This can cause damage, failure or malfunction.
3. In locations with poor electrical conditions, take steps to ensure a steady flow of the rated power supply. Use of a voltage outside of the specifications can cause malfunction, damage to the unit, electrocution or fire.
4. Do not touch connector terminals or internal circuit elements when current is being sup-plied. There is a danger of malfunction, damage to the unit or electrocution if connector terminals or internal circuit elements are touched when current is being supplied. Be sure that the power supply is OFF when adding or removing manifold valves or input blocks or when connecting or disconnecting connectors.
5. Operate at an ambient temperature that is within the specifications. Even when the ambient temperature range is within the specifications, do not use in locations where there are rapid temperature changes.
6. Keep wire scraps and other extraneous materials from getting inside these products. This can cause fire, failure or malfunction.
7. Give consideration to the operating environment depending on the type of enclosure being used.
To achieve IP65 and IP67 protection, provide appropriate wiring between all units using electrical wiring cables, communication connectors and cables with M12 connectors. Also, provide waterproof caps when there are unused ports, and perform proper mounting of input units, input blocks, SI units and manifold valves. Provide a cover or other protection for applications in which there is constant exposure to water.
8. Use the proper tightening torques.

There is a possibility of damaging threads if tightening exceeds the tightening torque range.

## $\triangle$ Caution

9. Provide adequate protection when operating in locations such as the following:

- Where noise is generated by static electricity
-Where there is a strong electric field
- Where there is a danger of exposure to radiation
-When in close proximity to power supply lines

10. When these products are installed in equipment, provide adequate protection against noise by using noise filters.
11. Since these products are components whose end usage is obtained after installation in other equipment, the customer should confirm conformity to EMC directives for the finished product.
12. Do not remove the name plate.
13. Perform periodic inspections and confirm normal operation, otherwise it may be impossible to guarantee safety due to unexpected malfunction or erroneous operation.

## Power Supply Safety Instructions

## ©Caution

1. Operation is possible with a single power supply or a separate power supply. However, be sure to provide two wiring systems (one for solenoid valves, and one for input and control units).
2. Use the following UL approved products for DC power supply combinations.
(1) Controlled voltage current circuit conforming to UL508

Circuit uses the secondary coil of an isolated transformer as the power supply, satisfying the following conditions.

- Max. voltage (with no load): 30 Vrms ( 42.4 V peak) or less
- Max. current: (1) 8 A or less (including shorts), and
(2) When controlled by a circuit protector (fuse) with the following ratings:

| No-load voltage (V peak) | Max. current rating |
| :---: | :---: |
| 0 to 20 [V] | 5.0 |
| Over 20 [V] and up to 30 [V] | 100 |
|  | Peak voltage value |

(2) A circuit (class 2 circuit) with maximum 30 Vrms ( 42.4 V peak) or less, and a power supply consisting of a class 2 power supply unit conforming to UL1310, or a class 2 transformer conforming to UL1585.

## Cable Safety Instructions

## © Caution

1. Avoid miswiring, as this can cause malfunction, damage and fire in the unit.
2. To prevent noise and surge in signal lines, keep all wiring separate from power lines and high voltage lines. Otherwise, this can cause a malfunction.
3. Check wiring insulation, as defective insulation can cause damage to the unit when excessive voltage or current is applied.
4. Do not bend or pull cables repeatedly, and do not place heavy objects on them or allow them to be pinched. This can cause broken lines.
